

- Improves faculty and student interaction in college and university settings
- Easy-to-use Engage Toolbar for more practical and powerful instruction
- Eliminates projectors, screens and paper with a large, six-line display
- Includes multi-functional keypad and calculator for easier test response
- No need to point and respond — radio frequency technology provides clear communication
- Includes reporting software for quick and easy access to your results

Engage. Respond. Succeed.

Engage Response System

Assessment Solutions

SCANTRON®

A successful course requires engaging the entire class.

Introducing the Engage™ Response System for collegiate success.

ENGAGE

Imagine you are looking out at a sea of students in an auditorium. How do you keep them engaged in your lecture? In many college and university classrooms, instructors find it difficult to engage students and instantly measure individual and class comprehension. With the Engage Response System you can hold their attention in the palm of your hand and get students participating like never before. You will get more out of your students—more engagement, more focus, more feedback, and, ultimately, more results.

RESPOND

There are many difficult concepts and theories at the collegiate level. Instructors can use the Engage Response System to obtain feedback throughout the class period. By immediately assessing student comprehension, instructors can drive home important concepts vital for success.

The Engage Response System is easy to use. The Engage™ Toolbar floats above other applications on your computer or projection screen and can be controlled from anywhere in the classroom or auditorium. The Engage™ Responder display accommodates up to six lines of text, allowing you to transmit an entire question, eliminating the need for projectors and paper. The Engage Response System uses radio frequency technology, so all you have to do is plug the receiver into any USB capable computer and you are up and running.

SUCCEED

The Engage Response System is an interactive tool designed to increase class participation. It keeps college students engaged, provides immediate feedback on important concepts, and identifies learning areas that need improvement. The Engage Response System facilitates interaction between the instructor and students, provides a quick and easy way to measure student comprehension, and offers another alternative for administering and scoring exams. The Engage Response System is redefining student interaction, performance and learning success in college and university classrooms worldwide.
