

Testing and Assessment

Easily Create Valid Tests Without Testing Your Patience

Educators can now create customized tests quickly and easily with ParTest. And you can import files that allow computer testing over local networks or on the Internet with ParTest Online.

ParTest

ParTest includes all the tools and technology to make test creation easy and more effective. Users can create numerous item banks, each with up to 2,000 questions— true/false, multiple-choice, fill in, matching and essay. All questions can be grouped by objective and include multimedia files.

When combined with its sister program ParScore, you can track statistical information for each question including item analysis, response frequency, discrimination levels and degree of difficulty.

ParTest is extremely user friendly. Simply select questions from various item banks via key-word search or create your own. Then you just drag and drop into a test singularly or in groups. All item banks, tests and test-related statistical data are easily imported and exported.

Put Your Options To The Test

ParTest allows you to share item banks with other users and create up to 26 versions of your tests. Using the “Quick Pick” feature, the computer will choose your test questions from the item banks.

A “Quick Preview” window lets you review and analyze test questions by displaying the answer explanation, showing degree of difficulty, discrimination levels, scores, item analysis and response frequency. You may also generate test keys and a variety of other useful reports. ParTest even lets you import standards-based questions from Scantron’s Skills Connection software.

Take It On Site Or On The Internet

With ParTest Online, you can import files that allow test takers to work via computer on a proprietary network or over the Internet. It maintains a test session list complete with the criteria for each online session. Test takers simply log on, enter a password and go to work. A security feature controls access to other files and applications during online tests. The secured Web browser installer restricts key access to students testing on the Internet.

ParTest Online also supports multimedia and graphic files with timed, forward-only, practice and

real-test modes. Unanswered questions can be bookmarked for later review. The test manager function allows users to review results and access test session criteria right from their PCs.

How ParTest Fits Into The System

ParSystem is Scantron’s integrated suite of powerful software modules that allow you to create, administer, and score tests on paper, via networks or over the Internet.

ParSystem’s three ingredients—ParTest, ParTest Online, and ParScore—all fit into Scantron’s overall student achievement package.

With ParTest, teachers can develop multi-format tests from numerous item banks.

ParTest Online enables test takers to test over networks and via the Internet.

ParScore completes the suite allowing educators to manage student records, analyze test outcomes and score reports.
