For Users in the United States

This equipment complies with the requirements in part 15 of FCC Rules for a Class A computing device. Operation of the equipment in a residential area may cause unacceptable interference to radio and television reception requiring the operator to take whatever steps are necessary to correct the interference.

For Users in Canada

The digital apparatus does not exceed the Class A limit for radio noise emission from digital apparatus set in the Radio Interference Regulations of the Canadian Department of Communications.

Le présent appareil numérique n’émet pas de bruits radioélectriques dépassant les limites applicables aux appareils numériques de la classe A prescrit dans le règlement sur le brouillage radioélectrique édicté par le Ministre des Communications du Canada.

Trademarks

Advanced Character Recognition, iNSIGHT, Mark Reflex, OpScan, ParScore, Prosper, Remark, ScanBook, ScanFlex, ScanMark, ScanTools Plus, ScanTools Prisma, Scantron DesignExpert, SelfScore, Survey Tracker Plus, TransOptic, Scantron, and the logo are trademarks in the U.S. and/or other countries, of Scantron Corporation or its affiliate(s).

Microsoft, Windows, and Vista are trademarks or registered trademarks of Microsoft Corporation in the United States and/or other countries.
Preface

About This Manual

This Operator’s Guide is your guide for day to day use of your scanner. It provides the information you need to handle basic tasks related to scanner operation, simple maintenance, and troubleshooting.

This manual covers the following models:

- OpScan 4ES
- OpScan 4ES with SelfScore
- iNSIGHT 4ES
- iNSIGHT 4ES with SelfScore

When important, differences between the scanners are explained in the text. Be sure to determine which scanner you own so that you know which information applies to you.
Software References

Your scanner can operate using any of the following software applications.

- ScanTools Plus®
- ScanTools Prisma®
- A custom software application created using ScanTools Plus Link SDK
- A custom application created using ScanTools Prisma SDK

This manual uses the generic term “ScanTools” when referring to whichever software option you are using to operate your scanner.

Document Organization

This manual is organized as follows:

- Chapter 1, “Scanner Basics”, provides an overview of OpScan 4ES and iNSIGHT 4ES scanner components, features, and system requirements, as well as safety and environmental information.
- Chapter 2, “Setting Up Your Scanner” describes how to set up your scanner, install the necessary driver software, and connect to the host computer.
- Chapter 3, “Operating Your Scanner” explains how to scan sheets with your scanner.
- Chapter 4, “Scanner Modes” describes the various scanner modes, when best to use each, and how to select them.
- Chapter 5, “Display Panel Messages” explains each of the display panel messages that you might see on the LCD (liquid crystal display) display panel.
- Chapter 6, “Using the Background Menu” provides a flowchart of the background menu system, as well as explanations of each function.
- Chapter 7, “ES/ScanMark Emulation” describes how to use ES/ScanMark™ mode to emulate a Scantron ES 2010, ES 2260, or ES 2800 scanner.
- Chapter 8, “Cleaning the Scanner” explains how to clean the scanner.
Preface

• Chapter 9, “Troubleshooting” provides a troubleshooting chart designed to help you resolve any issues you encounter.

• Chapter 10, “Product Support and Services” provides information on registering your product, resources that are available to help you with your scanning project, how to order supplies and forms, and how to contact Scantron Customer Support.

• Appendix A, “Recalibration” explains when and how to recalibrate the scanner.

• Appendix B, “Transport Printer” describes printer features, how to set up and test the printer(s), as well as cleaning and troubleshooting.

• Appendix C, “Bar Code Reader” explains bar code reader components, which bar codes can be read, how to scan bar codes, troubleshooting and testing.

• Appendix D, “Select Stacker” provides information on setting up, testing, and scanning with the Select Stacker. It also covers Select Stacker display panel messages and cleaning.

Related Documentation

This manual is part of a documentation set for the OpScan 4ES and iNSIGHT 4ES scanners. The documentation set provides information on packaging, installation, setup, operation, and configuration for users and system administrators. The documentation set consists of the following:

• OpScan 4ES and iNSIGHT 4ES Operator’s Guide (part number 277 283 xxx*)

• OpScan 4ES and iNSIGHT 4ES Quick Start (part number 277 284 xxx*)

• OpScan 4ES and iNSIGHT 4ES Quick Tips - Maintenance (part number 277 298 xxx*)

• OpScan 4ES and iNSIGHT 4ES Quick Tips - Display Panel Messages (part number 277 285 xxx*)

• Elements of Data Collection (part number 277 292 xxx*)
Preface

- *Scanning Tests, Ballots, and Surveys Using SelfScore** (part number 277 300 xxx*)
  * Where xxx indicates the current revision number.
  ** Only included with scanners equipped with the SelfScore option.

Contacting Customer Support

If you require assistance, see “Product Support and Services” on page 157 for information on contacting Scantron Customer Support.

World Wide Web Access

Chapter 1:
Scanner Basics

Congratulations on your purchase of the Scantron OpScan 4ES or iNSIGHT 4ES scanner. These scanners represent the latest in OMR\(^1\) only and OMR with imaging data collection technology.

In this chapter you will find a description of your scanner’s components, features, specifications, and system requirements, as well as safety and environmental information.

1. optical mark recognition
## Scanner Components

Use the illustrations below to identify scanner components, then find the component description in the corresponding table.

</tbody>
</table>
OpScan 4ES Standard Features

Standard Features

- 2800 sheet per hour throughput
- Automatic-feed
- Pencil mark detection
- Jam, multiple-sheet, and skew detection
- 40 character alphanumeric display panel
- Integrated diagnostics system with messages sent to scanner display panel and host computer
- Communications with host computer through a USB communications port
- Simultaneous transfer of data and scanning of forms
- Ability to read both Mark Reflex® and Trans-Optic® forms
- Handles all common spacings: .166, .166 48 cell, .200 inline, .200 offset, .200 line read, and .300 line read
- Input tray and output tray capacity of up to 100 sheets
- Sheet-handling capacity of 2.5 x 5-inch to 9 x 14-inch, 60-100 lb. offset sheets

Options

- Dual side read head for two-sided form scanning.
- Programmable interactive printer(s) that print information on the sheet being scanned based on the scanned data. The printer(s) can print error codes, alphanumeric messages, serial numbers, validation flags, and test scores with no effect on the throughput rate.
- Bar code reader (hardware) that can read bar codes in ladder format.
Chapter 1: Scanner Basics
OpScan 4ES Standard Features

- Download mode and documentation kit enables you to program the scanner using a series of commands downloaded from the host computer. Download supports use on platforms other than PC by using download programmability.

- SelfScore option, in combination with dual ink jet printers, allows operation as a test scoring machine with test scoring, survey, and ballot capabilities. SelfScore mode allows operation without connection to a host computer.

- Select Stacker allows separate stacking of sheets based on edit criteria selected in your scanning software.

Specifications

- Physical Description
  - Length: 21.25” (54 cm)
  - Width: 14.5” (37 cm)
  - Height: 9” (23 cm)
  - Weight: 17 lbs. (7.7 kg)

- Operating Environment
  - Temperature: 60°F to 85°F (16°C to 29°C)
  - Humidity: 40% to 60%, non-condensating

- Power
  - 100-240 volt operation: 100-240 volts AC (-10%, +6%): 47-63 Hz; US 3-prong plug; 15 amp dedicated circuit

- Communications
  - USB 1.1 or 2.0 - OpScan 4ES operates asynchronous using a virtual com port with user-defined protocol

- Operation
  - Read Heads: Contact image sensor arrays, 16 level OMR, pencil read capability
  - Scanning Rate: 2,800 sheets per hour (Actual scanning rate depends on quantity of data read)
Chapter 1: Scanner Basics
OpScan 4ES Standard Features

from the forms and the amount of processing done on the data while scanning)
iNSIGHT 4ES Standard Features

Standard Features

- Selectable OMR with imaging or OMR only based data collection
- 2300 sheets per hour throughput in OMR with Imaging mode
- 2800 sheets per hour throughput in OMR only mode
- Scanner provides 8-bit, 256 grayscale levels, and 200 dpi images
- Capture, name, and archive image clips (TIFF, JPEG)
- Software recognized bar code
- Automatic-feed
- Selectable pencil or ink mark detection
- Jam, multiple-sheet, and skew detection
- 40 character alphanumeric display panel
- Integrated diagnostics system with messages sent to scanner display panel and host computer
- Communications with host computer through a USB 2.0 communications port
- Simultaneous transfer of data and scanning of forms
- Ability to read both Mark Reflex® and Trans-Optic® forms
- Handles all common spacings: .166, .166 48 cell, .200 inline, .200 offset, .200 line read, and .300 line read
- Input tray and output tray capacity of up to 100 sheets
- Sheet-handling capacity of 2.5 x 5-inch to 9 x 14-inch, 60-100 lb. offset sheets
Chapter 1: Scanner Basics

Options

• Programmable interactive printer(s) that print information on the sheet being scanned based on the scanned data. The printer(s) can print error codes, alphanumeric messages, serial numbers, validation flags, and test scores with no effect on the throughput rate.

• Bar code reader (hardware type) reads bar codes in ladder format.

• Download mode and documentation kit enables you to program the scanner using a series of commands downloaded from the host computer. Download supports use on platforms other than PC by using download programmability.

• SelfScore option, in combination with dual ink jet printers, allows operation as a test scoring machine with test scoring, survey, and ballot capabilities. SelfScore mode allows operation without connection to a host computer.

• Select Stacker allows separate stacking of sheets based on edit criteria selected in your scanning software.

• Optional Advanced Character Recognition™ software allows processing of machine and hand print data.

Specifications

• Physical Description
  • Length: 21.25” (54 cm)
  • Width: 14.5” (37 cm)
  • Height: 9” (23 cm)
  • Weight: 17 lbs. (7.7 kg)

• Operating Environment
  • Temperature: 60° to 85°F (16°C to 29°C)
  • Humidity: 40% to 60%, non-condensating
Chapter 1: Scanner Basics
iNSIGHT 4ES Standard Features

- Power
  - 100-240 volt operation: 100-240 volts AC (-10%, +6%); 47-63 Hz; US 3-prong plug; 15 amp dedicated circuit

- Communications
  - Image operation using USB 2.0 (Can operate OMR asynchronously using a virtual com port with user-defined protocol)

- Operation
  - Read Heads: 200 dots per inch (dpi) resolution, up to 256 levels of grayscale per pixel; pencil and ink
  - Scanning Rate: 2,300 sheets per hour in OMR with Imaging mode, or 2800 sheets per hour in OMR only mode. (Actual scanning rate depends on quantity of data read from the form and the amount of processing done on the data while scanning).
Chapter 1: Scanner Basics

System Requirements

For information about system requirements for the OpScan 4ES or iNSIGHT 4ES scanner, go to www.scantron.com/scanners.
Chapter 1: Scanner Basics
User Precautions

User Precautions

Users and their employers need to observe the common sense precautions applicable to the operation of any machinery. These include, but are not limited to, the following:

- Do not wear loose clothing, unbuttoned sleeves, etc.
- Do not wear loose jewelry, bracelets, bulky rings, long necklaces, etc.
- Hair length should be kept short, using a hair net if needed, or tying long hair up in a bundle.
- Remove all loose objects from the area that could be drawn into the machine.
- Take sufficient breaks to maintain mental alertness.
- The scanner and power supply must only be used indoors in a dry location.
- Use only the power supply that was provided with your Scantron scanner. Do not substitute another power supply model or another manufacturer’s power supply.
- Use only the recommended cleaning supplies to prevent damage to scanner components.

Supervisors should review their practices and make compliance with these precautions a part of the job description for operation of the scanner.
Environmental Information

- Scantron scanners are designed to meet worldwide environmental requirements.
- Guidelines are available for the disposal of consumable items that are replaced during maintenance or service. Follow local regulations or contact your local sales agent for more information.
- For disposal or recycling information, contact your local authorities or, in the U.S., visit the Electronics Industry Alliance Web site at www.eiae.org.
- The product packaging is recyclable (although it should be retained in case the scanner needs to be shipped for service).

Waste Electrical and Electronic Equipment (WEEE)

This symbol indicates that when the last user wishes to discard this product, it must be sent to appropriate facilities for recovery and recycling. Please contact your local sales agent for additional information on the collection and recovery programs available for this product.
UL Regulatory Compliance Statement

CLASS 1 LED PRODUCT

- This class is eye-safe under all operating conditions
- Array pulse duration 256usec, maximum power output 0.34mW.

CAUTION: Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

LED Aperture
Chapter 2: Setting Up Your Scanner

This chapter covers setup of your OpScan 4ES or INSIGHT 4ES scanner.
Chapter 2: Setting Up Your Scanner
Selecting a Good Location

Selecting a Good Location

For best results, use the following general guidelines for placing your scanner:

1. **Air quality.** The scanner works better and lasts longer when it is not exposed to a lot of dust.

2. **Computer hookup.** Place the scanner within 6 feet of the computer to which it is to be connected.
   
   **NOTE:** A Scantron scanner running SelfScore in a stand-alone configuration does not need a computer hookup.

3. **Humidity.** Place the scanner in a location with 40% to 60% relative humidity. (If sheets have been in very humid or dry conditions, keep them in a climate controlled environment for 24 hours before you attempt to scan them.)

4. **Electrical noise.** Avoid locating the scanner near a generator or other type of large motor, such as an elevator, an air conditioner, or a refrigerator that produces electrical noise which might interfere with the scanner’s electronics.

5. **Power source.** Use a separate source of power (with surge protection) for the scanner. The circuit from the source (breaker box) should not supply power to a major piece of equipment other than the scanner, computer, and (optional) Select Stacker.

6. **Space.** Find a location that allows you plenty of working surface around the scanner. The scanner itself is 21 X 15 X 9 in. (54 X 37 X 23 cm).

7. **Temperature.** Place the scanner in a location with temperatures between 60° and 85° F (16° and 29° C).
Assembling the Scanner

1. Extend the positioning stand so that the scanner is placed at the proper angle for operation.

2. Install the paper guide by sliding it into the slot in the input tray.
Chapter 2: Setting Up Your Scanner
Assembling the Scanner

3. Install the input tray. Slide the end of the tray that has two prong-like tabs into the slots at the end of the scanner.

   NOTE: When removing the tray from the scanner, depress the tray release tab.

4. Insert the Quick Tips guides (shipped with your scanner) into the slot on the underside of the input tray. This helps prevent loss of the instructions.

5. Install the output tray (or the Select Stackers (see Appendix D) then continue with the next step.
Chapter 2: Setting Up Your Scanner
Assembling the Scanner

below). Hook the end of the tray that has two prong-like tabs into the end of the scanner.

6. Adjust the adjustment bar to the length of the sheets that you will be scanning.
Chapter 2: Setting Up Your Scanner
Installing Printer Cartridge(s)

Installing Printer Cartridge(s)

If your scanner is equipped with the transport printer option, use the following instructions to install the printer cartridges.

1. Unlatch and remove the printer cover.

2. Locate the cartridge holder(s).
Chapter 2: Setting Up Your Scanner
Installing Printer Cartridge(s)

3. Slide the printer cartridge into the cartridge holder “feet first” then press the top of the cartridge firmly into the cartridge holder until you feel two clicks. This ensures that the cartridge is fully seated.

4. If you have dual printers, repeat step 3 for the second printer.

5. Re-install the printer cover.

**NOTE:** For more printer information, refer to Appendix B.
Chapter 2: Setting Up Your Scanner
Installing Scanner Utilities Software

Installing Scanner Utilities Software

**NOTE:** If your scanner is equipped with SelfScore mode and you will be using it only in that mode, you do not need to install software.

**IMPORTANT:** Before connecting your scanner to the computer and turning it on, install the drivers and utilities software on the host computer as described below.

1. Insert the scanner utilities CD into the CD-ROM drive of your computer.
2. Browse to your CD-ROM drive.
3. Double-click the setup.exe file to run the setup program.
4. Follow the on-screen instructions to install the drivers and scanner utilities appropriate for your computer.
5. Click **Finish** when setup is complete.

Chapter 2: Setting Up Your Scanner  
Connecting the Scanner

This section describes how to connect the power supply and computer to your scanner.

**IMPORTANT:** Before connecting the scanner to the computer and turning it on, be sure to install the drivers and scanner utilities on the host computer as described in the previous section.

**Connecting the Power Supply**

1. Find the power cable and the power supply that came with your scanner.

2. Plug the end of the power cable (three-prong plug) into a properly grounded electrical outlet providing alternating current (AC).

**CAUTION:** If lightning damage is a possibility, use a power strip with surge protection.

**CAUTION:** Do not connect the scanner to an outlet that also serves another major piece of equipment other than the computer and the (optional) Select Stacker.
Chapter 2: Setting Up Your Scanner
Connecting the Scanner

3. Plug the rectangular end (three receptacles) of the power cable into the open end (with three prongs) of the power supply.

4. Plug the rounded end of the power supply into the power port on the back of the scanner.

**CAUTION:** Do not plug the rounded end of the power supply into any part of the computer.
Connecting the Scanner to the Computer

**NOTE:** If your scanner is equipped with SelfScore mode and you will be using it only in that mode, you do not need to connect the scanner to a computer.

1. Locate the USB ports on the back of your computer. Plug the A end (flat end) of the USB cable into the USB communications port.

**NOTE:** A USB 1.1 (OpScan 4ES) or 2.0 (OpScan 4ES or iNSIGHT 4ES) communications port is required.

**NOTE:** Do not connect more than one OpScan 4ES, iNSIGHT 4ES, or SelfScore scanner to the host computer at a time.
2. Plug the USB B connector (square end) into the USB port on the back of the scanner.

**IMPORTANT:** There may be a sticker covering the USB port. If so, remove it before plugging in the USB cable.
Chapter 2: Setting Up Your Scanner
Turning the Scanner On

Turning the Scanner On

**CAUTION:** Do not turn on the scanner before installing the drivers and scanner utilities software. Doing so may result in incorrect drivers being loaded. (This statement does not apply if you are using the scanner in SelfScore mode without a computer.)

1. Press the switch on the back of the scanner to turn the scanner on (I) or off (O).

2. After you turn on the scanner, wait for it to complete the self-test. The message “Initializing...” will appear on the display panel. After a few seconds, another message will appear indicating what action needs to be taken next.
Chapter 2: Setting Up Your Scanner
Installing Scanning Software

Installing Scanning Software

Install your scanning software. Refer to the documentation that came with your scanning software for instructions.

**NOTE:** TWAIN driver software is included on the utility CD. The TWAIN driver allows various TWAIN compatible software applications to interact and scan forms with your iNSIGHT 4ES scanner.

**IMPORTANT:** If you are replacing an older scanner but will still be using your original scanning software, you will likely find that you do not have a selection for your new scanner in your scanning software. In most cases, your older scanning software will work if you select an earlier version scanner that is compatible with the OpScan 4ES or iNSIGHT 4ES. Use the following as guidelines:

- If you purchased an OpScan 4ES, select OpScan 4 in your scanning software.
- If you purchased an iNSIGHT 4ES and will be running in OMR with Imaging mode, select iNSIGHT 4 in your scanning software.
- If you purchased an iNSIGHT 4ES and will be running in OMR Only mode, select OpScan 4 in your scanning software.
- If you purchased an OpScan 4ES or iNSIGHT 4ES and will be running in ES/ScanMark emulation mode, select the ES scanner that you have replaced (ES 2010, ES 2260, or ES 2800 scanner).
Handling “Recalibrate/See Manual” Messages

The scanner firmware does diagnostics checks each time the unit is powered on and during scanning. If the firmware determines that the read heads need to be recalibrated, you will see the following messages on the display panel.

- **RECALIBRATE. . . . . . . . .**
- **SEE MANUAL**

If you get these messages, see Appendix A for instructions regarding calibration.
Uninstalling Scanner Utilities Software

NOTE: This step is not part of setup. It is included in case you want to remove the drivers and scanner utilities software from your PC (e.g. if you move the scanner to a different computer).

If you want to uninstall the drivers and scanner utilities software, use the following procedure:

1. Before uninstalling the software, close all programs and turn off the scanner.
2. Open the Control Panel and access the list of programs. Wait for the list to populate.
3. Select the Scantron scanner utilities you have installed on your computer, and click Uninstall.
   A message appears asking you to confirm that remove the selected application and all of its features.
4. Click Yes.
5. Click Finish when the uninstall is complete.
Chapter 3: Operating Your Scanner

This section covers how to use your scanner for data collection.

**IMPORTANT:** Before using your scanner for high stakes testing, be sure to perform a test to ensure that your scanner and scanning software are working properly.
Chapter 3: Operating Your Scanner
Verifying Proper Setup

Verifying Proper Setup

Before starting your scanning session, you may want to verify that the scanner is set up properly.

1. Ensure that the positioning stand is in the down position.

2. Ensure that the power supply is plugged into both a wall outlet or power strip and the back of the scanner.
3. Ensure that the scanner is connected to the computer via USB cable.

4. Ensure that the input tray and output tray (or Select Stacker) are in place and that the adjustment bar is properly positioned for the sheets being scanned.
5. Ensure that the covers on the sheet deflector (or optional bar code reader), read head, and printer (optional) are closed and fully seated.
Configuring the Scanner

Your scanner comes preconfigured by Scantron ready to meet most scanning needs. However, should you have special requirements, use the background menus to configure the scanner. See Chapter 6, “Using the Background Menu” for information on how to configure the scanner.
Chapter 3: Operating Your Scanner

Scanning Procedure

Use the following procedure to scan a stack of sheets:

1. If there is no message in the display panel, bring the scanner out of sleep mode by pressing either button (about 2 seconds).

2. Verify that the scanner is ready to scan. With the input tray empty, the display panel should display the following message for all modes except ES/ScanMark,

   | INPUT TRAY EMPTY |
   | OFF             |

   or this message if you're in ES/ScanMark mode.

   | -ES/ScanMark-   |
   | Ready           |

   If the display does not match one of the two above, verify that you have properly set up the scanner as described in Chapter 2, “Setting Up Your Scanner”. If you are unable to correct the problem, refer to Chapter 9, “Troubleshooting”.

Scanning Procedure
Chapter 3: Operating Your Scanner
Scanning Procedure

3. Press the **Press To Load** button on the side of the input tray and while holding it down, complete steps 4 (optional), 5, and 6 in this procedure.

   **NOTE:** Depressing this lever allows the sheets you load to slide as far up into the input tray area as possible. This is important for proper feeding.

![](Press_To_Load_Button.png)

4. (Optional) If you have a large number of sheets to load, you may want to secure the Press To Load button in the down position by pushing in the **Tray Lock** while the button is depressed. To release the lock after you have loaded sheets, depress the **Press To Load** button once again and release it.

![](Input_Tray.png)

5. Load the input tray by stacking all sheets the same way as follows:
Chapter 3: Operating Your Scanner
Scanning Procedure

Stack the sheets so that the leading edge of the sheet goes into the scanner first, with the trailing edge going in last. Align the guide edge with the edge of the input tray closest to the front of the scanner (guide rail).

**NOTE:** Form ID Marks identify the sheet to the scanner. Timing Marks signal the scanner where to read across a sheet.

6. Verify that the sheets are as far toward the read head as possible. Slide the paper guide so that it just touches the sheets.

7. Open your scanning software on the host computer and use it to control the scanning process.
Chapter 3: Operating Your Scanner

Scanning Procedure

For software instructions, refer to the documentation for the software you are using.
Understanding Display Panel Messages

The display panel displays information regarding:

- Scanner status
- Errors
- What to do next
- Button functionality

See Chapter 5, “Display Panel Messages” for explanations of all display panel messages. They are listed alphabetically.
Clearing Document Jams

If documents jam during scanning, the display panel will display an error message. You can use the following general procedure for clearing jams, or see Chapter 5, “Display Panel Messages” for more information on the specific error message that you received.

1. Lift the following:
   - Sheet deflector (or optional bar code reader)
   - Read head
   - Transport Printer cover

2. Remove any sheets on the transport bed.

3. Close all covers making sure that each is fully seated.

4. Return any unscanned sheets to the input tray.

5. Press **START** (or **Cont** if in ES/ScanMark mode) to resume scanning.
Chapter 3: Operating Your Scanner
Clearing Document Jams

NOTES
Chapter 4: Scanner Modes

OpScan 4ES and iNSIGHT 4ES scanners can be operated in a number of different modes for data collection. These modes are:

- OMR with Imaging
- OMR Only
- ES/ScanMark
- Download Run and Download Debug
- SelfScore
- Scantron Score Emulation

Each of these modes is described in this chapter.
Chapter 4: Scanner Modes
OMR with Imaging Mode

OMR with Imaging Mode

Applies To
• iNSIGHT 4ES scanners
• iNSIGHT 4ES with SelfScore scanners

Overview
OMR with Imaging mode represents the latest advancements in data collection technology. Using OMR with Imaging mode, you can capture an image of the entire sheet or specific areas on the sheet. You can perform heads up editing where you can view an image of the grid on the sheet while you edit the ASCII data file. You can perform KFI (key from image) where you type data into the ASCII data file while viewing an image of the graybox field (i.e. comments or essay box). You can read bar codes in both ladder and fence orientations using your Scantron data collection software. You can also read machine or handprint data using optional OCR (optical character recognition) or ICR (intelligent character recognition) packages.

In OMR with Imaging mode, the scanner must be connected to a PC with ScanTools software. The software controls the scanner and captures the data.

When a new session is initiated, the software sends a “scan sheet” message to the scanner and the scanner responds by scanning a sheet. As each sheet is scanned, the scanner sends an image of the entire sheet back to the scanner for processing.

Once the image is received by the software, the data is extracted based on the form definition in the software. OMR bubble grids are resolved by the software and are converted to their ASCII equivalent. Image data is saved for each image clip area that was specified in the form definition. Bar code image data is converted to its ASCII equivalent. And, if optical character recognition (OCR) or intelligent character recognition (ICR) is being used, those grids are converted to their ASCII equivalent as well.
The resulting data is stored on the PC as an ASCII data record and image data. This process is performed for each sheet scanned until the operator ends the session.

**NOTE:** Because the ScanTools data collection software handles the image data sent from the scanner, you should consult your software documentation to realize the full potential of OMR with Imaging mode.

**When To Use** Use this mode if you want to:

- Convert and save bubble data to ASCII
- Convert and save bar code (ladder or fence orientation) data to ASCII
- Convert machine print to ASCII (using optional OCR software)
- Convert hand print to ASCII (using optional ICR software)
- Save grayscale or B&W images of clip regions
- Save grayscale or B&W images of the entire sheets
- View a portion of the sheet to aid in editing the ASCII data that has been collected (commonly known as heads up editing)
- View a portion of the sheet to enter data into the ASCII data record (commonly known as key from image or KFI)

**When To Avoid** Select a different mode if:

- You are only capturing bubble data and scanning speed is most important to you (OMR Only mode is 22% faster)
- Your PC does not meet the minimum requirements for ScanTools in imaging mode (OMR Only mode uses less system resources)
Chapter 4: Scanner Modes
OMR with Imaging Mode

- You do not have ScanTools software, or you are working on a computer platform that is not PC (Download mode works with computer platforms other than PC. SelfScore mode allows the scanner to function without connection to a PC.)

- You simply want to score tests or tally surveys or ballots and do not need to retain the ASCII data (SelfScore mode is simple to use and does not require a PC)
Chapter 4: Scanner Modes

OMR Only Mode

**IMPORTANT:** When running the scanner in OMR only mode, you must configure your scanning application to the virtual serial port to which the scanner is connected. If you are uncertain of the com port to which the scanner is connected, begin with the highest available and work your way down.

**Applies To**
- OpScan 4ES scanners
- OpScan 4ES with SelfScore scanners
- iNSIGHT 4ES scanners
- iNSIGHT 4ES with SelfScore scanners

**Overview**

OMR Only mode uses classic data collection technology. In this mode, the scanner sends an ASCII representation of the marks on the sheet to the computer for each sheet scanned.

In OMR Only mode, the scanner must be connected to a PC with Scantron software (e.g. ScanTools, Remark™, Prosper™, SurveyTracker Plus®). The software controls the scanner and captures the data.

When a new session is initiated, the software sends a “scan sheet” message to the scanner and the scanner responds by scanning a sheet. As each sheet is scanned, the scanner reads all the cells across the form at each timing mark. The scanner assigns a darkness level based on a 16 level gradient to each cell and passes this “raw” data back to the software in the PC.

The data collection software in the PC translates the raw data to ASCII data based on the form definition and stores an ASCII data record for each sheet. The process is repeated for each sheet until the operator ends the session.
Chapter 4: Scanner Modes
OMR Only Mode

**When To Use**
Use this mode if you want to:

- Convert and save only bubble data to ASCII
- Use Scantron software applications such as ScanTools, Remark, Prosper, or SurveyTracker Plus
- Process sheets quickly (OMR Only mode is 22% faster than OMR with Imaging mode)

**When To Avoid**
Select a different mode if:

- You want to collect image, bar code, or machine or hand print data (use OMR with Imaging mode to collect these types of data)
- You cannot use Scantron data collection software or you are working on a computer platform that is not PC (Download mode works with computer platforms other than PC and does not require Scantron data collection software)
- You simply want to score tests and do not need to retain data (SelfScore mode is simple to use and does not require a PC or software)
Chapter 4: Scanner Modes
ES/ScanMark Mode

ES/ScanMark Mode

Applies To
- OpScan 4ES scanners
- OpScan 4ES with SelfScore scanners
- iNSIGHT 4ES scanners
- iNSIGHT 4ES with SelfScore scanners

Overview
ES/ScanMark emulation mode enables the OpScan 4ES or iNSIGHT 4ES to function like a Scantron ES 2010, ES 2260, or ES 2800 scanner. This allows you to use your existing software and form definitions with your new scanner.

In ES/ScanMark emulation mode, the scanner must be connected to a PC with Scantron software (e.g. ScanBook™, ParScore™, etc.). The software controls the scanner and stores the data.

When a new session is initiated, the software sends a form definition to the scanner. Once the form definition is loaded it is retained in memory until cleared.

After the form definition is in scanner memory, you can invoke your data collection software to start scanning sheets. As each sheet is scanned, each row of cells at each timing mark is converted to 16 level raw data. Once the raw data is gathered from the entire sheet, it is interpreted by the form definition in the scanner and sent back to the software in the PC as an ASCII data record. This process is repeated for each sheet scanned.

When To Use
Use this mode if you want to:
- Convert and save only bubble data to ASCII
- Emulate a Scantron ES 2010, ES 2260, or ES 2800 scanner
- Use Scantron software applications such as ScanBook and ParScore
Chapter 4: Scanner Modes
ES/ScanMark Mode

- Use existing form definitions for Scantron forms that you've used in the past
- Create new applications with your legacy Scantron scanning software

**When To Avoid** Select a different mode if:

- You want to collect image or machine or hand print data (use OMR with Imaging mode to collect these types of data)
- You cannot use Scantron data collection software
- You simply want to score tests and do not need to retain data (SelfScore mode is simple to use and does not require a PC or software)
Download Run and Download Debug Mode

The Download modes enable you to program the scanner using a series of commands downloaded from the host computer. Select Download Run mode to run download programs. Select Download Debug to debug Download programs.

Applies To

- OpScan 4ES scanners
- OpScan 4ES with SelfScore scanners
- iNSIGHT 4ES scanners
- iNSIGHT 4ES with SelfScore scanners

Overview

NOTE: Download modes require an understanding of computer communications and command line programming. If you do not have these abilities, we recommend selecting a different mode.

In the Download modes, you create a program that loads the form definition to the scanner and controls the scanning process. The scanner must be connected to a computer. However, it does not have to be a PC. Download mode works with Unix, Mac, and other platforms.

There is a document that will help you use Download mode: the Download Utility User’s Guide. We recommend acquiring this guide before you start.

To use the Download modes, first set the scanner communications parameters. Next, create a command (.DLF) file. The command file contains the form definition (the definition of the bubble grids that will be converted to ASCII). Once completed, the command file is sent to the scanner.

With the form definition loaded, send runtime parameters to the scanner using the runtime parameter (.RTP) file. Next, begin scanning by sending the initiate code. As each sheet is scanned, the scanner evaluates the cells and converts the bubble
Chapter 4: Scanner Modes

Download Run and Download Debug Mode

data to its ASCII equivalent based on the stored form definition. The scanner sends an ASCII data record back to the computer for each sheet scanned.

When To Use
Use these modes if you want to:

• Use a host computer that is not a PC

When To Avoid
Select a different mode if:

• You do not have someone to set the communications parameters and to do the command line programming
SelfScore Mode

Applies To
- OpScan 4ES with SelfScore scanners
- iNSIGHT 4ES with SelfScore scanners

Overview
SelfScore mode is data collection in its simplest form. In SelfScore mode, the scanner functions as a test scoring machine that can score tests as well as tally ballots and surveys. The scanner can function as a standalone unit where the data is not retained, or can be connected to a PC if you wish to collect and manage the ASCII data. In SelfScore mode, the scanner has form definitions for standard test forms available from Scantron so there is no need to create or download a form definition.

To start a new session, load the key into the input tray and press the **START** button. The scanner scans the key and loads the key into memory. Next, load the tests into the input tray and press the **START** button. The scanner feeds tests and scores them. If desired, you can complete your scoring session by scanning an item analysis form that will provide cumulative data regarding the test.

If your scanner is connected to a PC with ScanTools software, you can collect ASCII data as well. Otherwise the key and item analysis data is erased from memory when you start the next batch of tests or turn off the scanner.

Special Features
Some of the special features supported by SelfScore mode are:
- Multiple keys
- Scoring and rescoring tests
- Combined subjective and objective and test scores
- Scores based on groups
- Letter grades on tests
Chapter 4: Scanner Modes
SelfScore Mode

• Test analysis reports (item analysis and frequency distribution)
• Printing results directly on class rosters
• Tallying surveys and ballots
• Survey and ballot results based on groups
• Survey and ballot analysis reports

When To Use
Use this mode if:

• You want to use Scantron standard test forms
• You want to use the scanner as a stand alone test scoring machine
• You want to error mark and score tests
• You do not want to use a Scantron software application to collect data
• You have a PC and ScanTools software and want to collect ASCII data

When To Avoid
Select a different mode if:

• You need to use a custom form (ScanTools in combination with OMR with Imaging mode or OMR Only mode is best for that)
• You want to collect image, bar code, or machine or hand print data (use OMR with Imaging mode to collect these types of data)
• You want to collect data and you are working on a computer platform that is not PC (Download mode works with computer platforms other than PC)
Chapter 4: Scanner Modes

Scantron Score Emulation Mode

**Applies To**
All iNSIGHT 4ES, OpScan 4ES with SelfScore, and SelfScore scanners.

**Overview**
Scantron Score mode allows you to use your iNSIGHT 4ES scanner to perform the following Scantron Score functions.

**Test Scoring**
- Score multiple choice, true/false, and matching tests
- Print a red error mark to indicate a wrong answer
- Print correct answer (alphabetic or numeric) next to incorrect answer (optional)
- Print the total number of correct answers
- Print the percentage correct (optional)
- The Student ID feature allows you to associate results with a specific student when used with Remark software
- Scantron Score emulation mode works with most of the same forms used with Scantron Score and 888P+ scanners. Visit www.ScantronStore.com for a list of compatible forms. Note that two sided scanning requires a 4ES form, such as form SC882-4ES
- Scantron Score emulation mode can be used with optional Remark Classic OMR software to provide a variety of informative reports

**Item Analysis**
- Print the number of tests processed
- Print the number or percent of students answering each question incorrectly
- Print an average score
Chapter 4: Scanner Modes
Scantron Score Emulation Mode

Subjective Score Box

• Allows an instructor to combine a score for a performance-based activity (i.e. essay, oral exam, lab assignment) with a score from an objective test (i.e. multiple-choice, true/false, matching)
• Total subjective points possible = 163

Ballots

• Counts ballots and gives you results for student elections, etc

Surveys

• Tallies responses from teacher evaluations, community surveys, etc

Prerequisites

Firmware version 8.0 or greater is required.
Chapter 4: Scanner Modes
Scantron Score Emulation Mode

**Printer Positioning**

There are small triangles on the scanner printer ruler indicating printer position locations.

When operating in Scantron Score emulation mode, the printer position must be set to 2.5 inches and 6.2 inches to properly print the incorrect marks, percentage, score, etc. on Scantron Score forms.

To position the printer, complete the following steps.

1. Unlatch and remove the printer cover by lifting up on the handle and pulling the cover towards you.
Chapter 4: Scanner Modes
Scantron Score Emulation Mode

2. Note the location of the cartridge holder inside the printer assembly. Also note the ruler, printer alignment mark, and thumbscrew that sits beside the cartridge holder. These are the elements used to position the printer.
3. Scantron Score forms require that printers used with an /NSIGHT 4ES scanner are positioned at 2.5 inches and 6.2 inches. Check the printer(s) to ensure that they are in the correct position.
4. If the printer position requires adjustment, loosen the thumbscrew so you can move the printer.
5. Adjust the position of the second printer to the 6.2 inch mark.
Chapter 4: Scanner Modes
Scantron Score Emulation Mode

6. Move the printer to the 2.5 inch mark and lightly tighten the thumbscrew.
Chapter 4: Scanner Modes
Scantron Score Emulation Mode

7. Replace the printer cover, ensuring that it is firmly seated.

Select Stacker  Note that the Select Stacker is not supported on the iNSIGHT 4ES scanner operating in Scantron Score emulation mode.
Chapter 4: Scanner Modes
Scantron Score Emulation Mode

Marking Keys and Scoring Tests

For Single Sided Keys:

Mark the Key

1. Mark the key using the same form used by students.
2. Find the key marking row immediately above the first question.
3. Mark a scoring option using the following guidelines:

   - [Error mark and print score (required)]
   - [Print correct answer (for A-E forms)]
   - [Print correct answer (for 1-5 forms)]

   To add % correct, mark % in combination with your scoring option above.

4. Mark the correct answer to each question.

Score the Tests

1. Press Start.
2. Load the tests and keys into the hopper with the keys on top (so they will scan first).
3. (optional) Feed an item analysis form by following the instructions on the form and on the screen.

NOTE: If scanning to software (for example, Remark Classic OMR) press Save to transfer the data to the computer before pressing End.
For Two Sided Keys:

When using a 4ES form, such as the SC882-4ES on a dual head 4ES scanner, Scantron Score emulation mode allows you to scan both sides of a form simultaneously, and print a total for both sides. Other forms, or a single head scanner, allow you to scan and total a single side of a form at a time (see For Single Sided Keys).

Mark the Key

To combine the side 1 and side 2 score:

1. Mark a key scoring option on side 1 as for single sided (see above).
2. Mark only key bubble 5 on side 2 (all scoring options from side 1 will carry over).
3. Mark the correct answer to each question.

Score the Tests

1. Press Start.
2. Load the tests and keys into the hopper with the keys on top (so they will scan first).
3. (optional) Feed an item analysis form by following the instructions on the form and on the screen.

   NOTE: For two sided forms, the scanner calculates the score from both sides of the form, but only places error marks/correct answers for questions on the front side of the form. The total printed on the front side of the form...
includes scores from both the front and back sides of the form.

4 When finished feeding forms, press **End**.

NOTE: If scanning to software (for example, Remark Classic OMR) press **Save** to transfer the data to the computer before pressing **End**.
Chapter 4: Scanner Modes
Scantron Score Emulation Mode

For Multiple Key Versions (on select forms):

Mark the Key

1. Mark the key marking rows as you would normally for a single or two sided key (see above).
2. Locate the version ID area on the test form.
3. Mark one letter per key, so that each key has a unique identifier.
4. Ensure that each student test form is marked with the appropriate key identifier before scoring.

Score the Tests

1. Press **Start**.
2. Load the tests and keys into the hopper with the keys on top (so they will scan first).
3. (optional) Feed item analysis forms by following the instructions on the form and on the screen.
4. When finished feeding forms, press **End**.

NOTE: If scanning to software (for example, Remark Classic OMR) press **Save** to transfer the data to the computer before pressing **End**.
Subjective Scores (on select forms):

Mark the Key

To print a combined objective and subjective score on each test:

1. Mark the total possible subjective points in the Subjective Score area of the test key. Mark only one bubble per line, for a maximum of 163 points.

2. Mark the subjective score on the student test forms before scoring them.

Score the Test

Scan key(s) and tests as you would normally (see above).

Rescoring Tests

The Rescore button offsets the printing slightly, so you can score tests a second time and see differences clearly.

1. Press Rescore.
Chapter 4: Scanner Modes
Scantron Score Emulation Mode

2 Feed the key and test forms as you would normally.

Tallying Surveys or Ballots

1 Mark the key marking row for surveys or ballot:

2 Press Start.
3 Feed the ballot or survey key.
4 Feed the ballot or survey forms (up to 9,999).
5 Feed a Tally form.

Troubleshooting
- View on-screen error messages for error type and recovery information.
- For technical assistance, contact Scantron Support at 1 800 338 5544.
Chapter 4: Scanner Modes
Scantron Score Emulation Mode
Chapter 5: Display Panel Messages

One of the key features of the OpScan 4ES and /NSIGHT 4ES scanners is the integrated diagnostics system. During operation, the scanner performs numerous checks to ensure that the scanner is functioning properly. If the scanner detects an issue, a message appears in the liquid crystal display (LCD) panel.

In this chapter, all of the display panel messages are listed in alphabetical order. For each display message, you will find information regarding:

- What the message means
- How to resolve the issue
- What the buttons do

NOTE: Except for scanners with the SelfScore option, the operator panel “blanks” if the scanner sits idle.
Chapter 5: Display Panel Messages

for awhile. Press any key on the panel to reactivate it.
Chapter 5: Display Panel Messages

Scanner Paper Path

The arrows in the illustration below show the path that a sheet takes while moving through the scanner. Use this illustration as a guide to the terminology found in this chapter.
Clean Read Head

This message appears when the image quality check, done before each sheet is scanned, fails. When this happens, the sheet does not feed onto the transport bed.

To resolve this condition:

1. Clean the entire top and bottom read head area. Refer to Chapter 8, “Cleaning the Scanner” for information on the recommended cleaning procedure.

   NOTE: Single read head scanners do not have a bottom read head.

2. Make certain the last sheet you tried to scan aligns with the edge of the input tray closest to the front of the scanner. Adjust the paper guide if necessary.

Press START to resume scanning.

Press OFF to put the scanner into sleep mode.
Clean Read Head/Last Sheet Selected/Refeed

**Last Sheet**

```
CLEAN READ HEAD
\OFF\↓ \START↓
```

```
LAST SHEET SELECTED
\OFF\↓ \START↓
```

```
REFEED LAST SHEET
\OFF\↓ \START↓
```

This message appears when the image quality check, done after the sheet is scanned, fails. This is sometimes caused by a sheet that jams in the read head area. It can also be caused by a dirty top or bottom read head.

**NOTE:** The “LAST SHEET SELECTED” message appears only if a Select Stacker is attached.

To resolve this condition:

1. Remove the sheet from the transport bed or the Select Stacker lower tray.
   
   **CAUTION:** If the sheet is on the transport bed, remove it by pulling it forward or backward along the paper path. Do not pull the sheet out sideways (i.e. away from the guide rail) because you may damage the rollers.

2. Clean the entire top and bottom read head area. Refer to Chapter 8, “Cleaning the Scanner” for information on the recommended cleaning procedure.

   **NOTE:** Single read head scanners do not have a bottom read head.

3. Place the sheet not scanned successfully back in the input tray.
Chapter 5: Display Panel Messages
Display Panel Messages

Press START to resume scanning.
Press OFF to put the scanner into sleep mode.

Clean Read Head/Refeed Last Sheet

To resolve this condition:

1. Remove the sheet (if present) from the transport bed.

   **CAUTION:** If the sheet is on the transport bed, remove it by pulling it forward or backward along the paper path. Do not pull the sheet out sideways (i.e. away from the guide rail) because you may damage the rollers.

2. Clean the entire top and bottom read head area. Refer to Chapter 8, “Cleaning the Scanner” for information on the recommended cleaning procedure.

   **NOTE:** Single read head scanners do not have a bottom read head.

3. Place the sheet not scanned successfully back in the input tray.

Press START to resume scanning.
Press OFF to put the scanner into sleep mode.
Chapter 5: Display Panel Messages

  Ready

This message indicates that the scanner is ready to receive a form definition or a command from the computer.

To resolve this condition, use your scanning software on the host computer to download a form definition or to start the scanning process.

Recalibrate/See Manual

RECALIBRATE. .........

SEE MANUAL

This message appears when the firmware within the scanner determines that recalibration is necessary. See Appendix A, “Recalibration” for instructions regarding how to recalibrate the scanner.
Reconfigure Host/See Manual

RECONFIGURE HOST . . . .

SEE MANUAL

This message appears when not in ES/ScanMark mode and when the firmware determines that the communications parameters need to be set.

To resolve this condition, reset the communications parameters to the factory standard settings. See “Comm Configuration (When Not in ES/ScanMark Mode)” on page 116 for details.

--Rejected--

--Rejected--

This message appears when in ES/ScanMark mode and an incorrect sheet was scanned in the Comm Config submenu. The correct form is F-7545-STC.

Press Cont to get back to the Feed ComConfig Sheet prompt. Feed the correct sheet to set the Comm Configuration. Press Quit from that menu item to abort Comm Configuration.

RS-232 Error

-ES/ScanMark-
RS-232 Error

or

-User Program-
RS-232 Error
Chapter 5: Display Panel Messages
Display Panel Messages

This message appears when in ES/ScanMark mode. It indicates that the scanner detected a mismatch in the serial communication parameters used by your scanning application and those used by the scanner.

To resolve this condition, reconfigure your scanner with the serial communication parameters used by your scanning application. See “Comm Config - Display” on page 120 for details.

ScanMark Init Reqd

This message indicates that the scanner failed its internal nonvolatile memory test.

To resolve this condition, press Cont. The scanner will automatically reinitialize the internal nonvolatile memory. You should not see the message again.

If you get the message repeatedly, contact Scantron Customer Support.

Sensor 1 Blocked

This message appears on initialization only. It indicates that the read head is blocked by paper.

To resolve this condition, verify that there is no paper blocking the paper path of the scanner. If the error persists contact Scantron Customer Support.

Press Quit to ignore the error.

Press Cont to retest the read head after clearing the paper path.
Sheet Did Not Feed/Check Input Path

This message appears when the read head cannot detect a sheet in the transport bed within a specified period of time. This is usually caused by the sheets in the input tray not being pushed fully toward the read head when loaded.

To resolve this condition:

1. Depress the Press To Load button and move the sheets toward the read head.

2. Align the sheets with the edge of the input tray that is closest to the front of the scanner (guide edge).

3. Slide the paper guide so that it is just touching the sheets.

Press START to resume scanning.

Press OFF to put the scanner into sleep mode.

Sheet Did Not Feed/Check Sheet Deflector

This message appears when the sheet deflector is not completely closed. The sheet deflector must be completely down for the scanner to properly sense sheets.
Chapter 5: Display Panel Messages

To resolve this condition, press down firmly on the sheet deflector so that it is fully seated.

Press **START** to resume scanning.

Press **OFF** to put the scanner into sleep mode.

Sheet Did Not Leave Output Stacker

The scanner displays this message when a sheet jams. This error is also displayed as a result of a dirty sensor and/or dirty conditions surrounding the sensor area.

**NOTE:** Refer to the section “Cleaning the Select Stacker” on page 216 of this manual for directions on cleaning the Select Stacker.

To resolve this condition:

1. Clear all sheets from the scanner and Select Stacker transport bed.

2. Blow canned air (Scantron recommends a non-condensing propellant) onto the output sensor and surrounding area to remove paper dust and debris.

3. Place any sheet(s) not processed by the host software back in the input tray.

Press **START** to continue scanning after taking corrective action.

Press **OFF** to put the scanner in sleep mode.
Sheet Did Not Leave Select Stacker

The scanner displays this message when a sheet jams. This message is also displayed as a result of a dirty sensor and/or dirty conditions surrounding the sensor area.

**NOTE:** Repair a sheet if it is torn, or otherwise damaged. If repair is not possible, copy the marks from a damaged sheet onto a new sheet.

To resolve this condition:

1. Clear all sheets from the scanner and Select Stacker transport bed.
2. Blow canned air (Scantron recommends a non-condensing propellant) onto the select sensor and surrounding area to remove paper dust and debris.
3. Place any sheet(s) not processed by the host software back in the input tray.

Press **START** to continue scanning after taking corrective action.

Press **OFF** to put the scanner in sleep mode.
Chapter 5: Display Panel Messages

Sheet Did Not Reach Output Stacker

The scanner displays this message when a sheet jams, a sheet skews too far out to be read by the output stacker sensor, or a cable becomes disconnected.

To resolve this condition:

1. Clear all sheets from the scanner and select Stacker transport bed.
2. Check cable connections.
3. Check for obstructions in the paper path.
4. Place any sheet(s) not processed by the host software back in the input tray.

Press START to continue scanning after taking corrective action.

Press OFF to put the scanner in sleep mode.

Sheet Did Not Reach Select Stacker

The scanner displays this message when a sheet jams, a sheet skews too far out to be read by the stacker sensor, or a cable became disconnected.
NOTE: To clear a jam, remove the sheet(s) from the transport bed. You may need to turn the roller knob to eject the sheet.

To resolve this condition:

1. Clear all sheets from the scanner and Select Stacker transport bed.
2. Check cable connections.
3. Check for obstructions in the paper path.
4. Place any sheet(s) not processed by the host software back in the input tray.

Press START to continue scanning after taking corrective action.

Press OFF to put the scanner in sleep mode.

Sheet Skewed/Last Sheet Selected/Refeed

Last Sheet

<table>
<thead>
<tr>
<th>SHEET SKewed</th>
<th>↓OFF↓  ↓START↓</th>
</tr>
</thead>
<tbody>
<tr>
<td>LAST SHEET SELECTED</td>
<td>↓OFF↓  ↓START↓</td>
</tr>
<tr>
<td>REFEED LAST SHEET</td>
<td>↓OFF↓  ↓START↓</td>
</tr>
</tbody>
</table>

This message appears when a sheet feeds onto the transport bed at an angle or when a sheet has a torn or bent edge. When this error is detected, the sheet is stopped on the transport bed.

NOTE: The “LAST SHEET SELECTED” message appears only if a Select Stacker is attached.
Chapter 5: Display Panel Messages

To resolve this condition:

1. Remove the sheet from the transport bed (or from the lower tray of the Select Stacker if installed).

2. Repair the sheet if it is torn or otherwise damaged. If you cannot repair the sheet, copy the marks from the damaged sheet onto a new sheet.

   **NOTE:** Tape on a sheet may result in a “Multiple Sheets Fed” error.

3. Place the sheet (or replacement sheet) back in the input tray.

4. Adjust the paper guide so that it is just touching the sheets.

Press **START** to resume scanning.

Press **OFF** to put the scanner into sleep mode.

**Sheet Too Thin/See Manual**

This message appears when the last sheet that the scanner attempted to scan was thinner than the one before it. This condition can occur when the sheet thickness error detection is being performed by the scanner. After the scanner stops and is restarted, the thickness of the first sheet is measured and stored as the reference. If multiple sheets are picked (as the first sheet after the scanner is restarted), the thickness value is larger than it should be. Consequently, the second sheet (not a multiple) will cause a “Sheet Too Thin” message to be displayed.

To resolve this condition:
1. Verify that the last two sheets in the output tray (top tray for scanner with a Select Stacker) were processed correctly.

   - The sheet left on the transport bed needs to be rescanned.
   - The last sheet in the output tray (upper tray for scanners with the Select Stacker) needs to be checked.

   **NOTE:** If two sheets are stuck together they may both be in the output tray. If so, they should be separated and rescanned.

2. If necessary, perform error recovery in your software application on the host computer.

   Press **START** to resume scanning.

   Press **OFF** to put the scanner into sleep mode.

### Stopped

```
STOPPED
↓OFF↓  ↓START↓
```

This message appears in two situations:

- When you issue instructions from the computer to the scanner to stop all processing.
- When you press the **STOP** button.

To resolve this condition, press **START** or use the software on the host computer to issue instructions to resume scanning.

Press **OFF** to put the scanner into sleep mode.
Chapter 5: Display Panel Messages
Display Panel Messages

Stopping

STOPPING

This message appears when the operator presses STOP on the scanner or issues a stop scanning instruction from the software on the host computer. The message displays until the scanner receives an acknowledgement from the computer or until the computer transmits all data. When that happens, the STOPPED message is displayed.

To resolve this condition, wait until the next message is displayed in the display panel.

TM Count Error

TM Count Error
↓QUIT↓   ↓CONTINUE↓

This message appears during Top or Bottom Read Validation if an incorrect sheet is scanned. The correct sheet is part number 202-171-989.

Press CONTINUE to continue read validation.

Press QUIT to abort the validation.

Unexpected Sheet At Output Stacker

UNEXPECTED SHEET AT
↓OFF↓   ↓START↓

OUTPUT STACKER
↓OFF↓   ↓START↓

This message displays when a sheet arrives at the wrong stacker. This message is also displayed as a result of a dirty sensor and/or dirty conditions surrounding the sensor area.
Chapter 5: Display Panel Messages
Display Panel Messages

**NOTE:** Refer to “Cleaning the Select Stacker” on page 216 of this manual for directions on cleaning the select stacker.

To resolve this condition:

1. Clear all sheets from the scanner and Select Stacker transport bed.

2. Blow canned air that uses a non-condensing propellant onto the output sensor and surrounding area to remove paper dust and debris.

3. Place any sheet(s) not processed by the host software back in the input tray.

Press START to continue scanning after taking corrective action.

Press OFF to put the scanner in sleep mode.

**Unexpected Sheet at Select Stacker**

This message is displayed when a sheet arrives at the wrong stacker. This message is also displayed as a result of a dirty sensor and/or dirty conditions surrounding the sensor area.

**NOTE:** Refer to “Cleaning the Select Stacker” on page 216 of this manual for directions on cleaning the Select Stacker.

To resolve this condition:

1. Clear all sheets from the scanner’s transport bed.
2. Blow canned air onto the select sensor and surrounding area to remove paper dust and debris.

3. Place any sheet(s) not processed by the host software back in the input tray.

Press **START** to continue scanning after taking corrective action.

Press **OFF** to put the scanner in sleep mode.

**User Program**

This message indicates that the scanner received, accepted, and acknowledged a valid form definition.

This message is information only and requires no action.

**Waiting**

This message indicates that the scanner is waiting for instructions from your scanning software.

This message is information only and requires no action.
Chapter 5: Display Panel Messages

Waiting For Computer

This message means that the scanner is ready to scan and is waiting for instructions from the computer. It appears after forms have been loaded and the START button has been pressed.

Press STOP to take the scanner out of the “ready” state.

Press OFF to put the scanner into sleep mode.

Zone Error

This message indicates that the form scanned has an error in one of the zones.

To resolve this condition, review the form for correctness.
NOTES
The background menu gives you access to functions that include:

- Scanner Mode
- Default Settings
- Utility Functions
- Diagnostic Functions

The background menu is designed for quick navigation. Press the right button (usually “Next”) to bypass functions and to leave selections unchanged. Press the left button to enter submenus, run functions, or change selections.

This chapter gives you an overview of the entire background menu system in the form of a flowchart. It also covers details for each menu item.
Chapter 6: Using the Background Menu

The menu items are listed in the order that they appear in the background menu. However, not all menu items apply to each model scanner, or for each mode. See the description for each menu item to determine if it applies to the model you have and the mode that you are in.
Chapter 6: Using the Background Menu

Entering the Background Menu

Enter the background menu by holding down both buttons for about five seconds. When the message “Background Menu” appears briefly, release the buttons.
The background menu is organized as shown below. The flowchart shows ALL menu items (for all model scanners and for all modes). See the individual menu item descriptions to see if the menu items apply to your model scanner and the mode that you are in.
Chapter 6: Using the Background Menu

Scanner Information

Scanner information is displayed immediately after you enter the background menu. These two menu items are “display only” information that cannot be changed.

Scanner Model

<table>
<thead>

</tr>
</tbody>
</table>
Chapter 6: Using the Background Menu
Defaults Menu

- Off

**Shown For**  
All models, all modes except SelfScore. It is not shown for the SelfScore mode because SelfScore requires that dual printers are enabled (turned on).

**Description**  
This menu item allows you to enable (turn on) or disable (turn off) the printer(s).

Press **Change** to change printer status.

Press **Next** to advance to the next menu item.

---

**Reverse Printing**

\[ \text{Reverse Printing=}<\text{Status}> \]

\[ \text{Change} \quad \text{Next} \]

**Variables**  
Where `<Status>`=
  - On
  - Off

**Shown For**  
All models, all modes except ES/ScanMark and SelfScore when the printer(s) are turned on.

**Description**  
This menu item allows you to turn reverse printing on or off. When reverse printing is on, the characters print upside down when viewing the sheets as they pass through the scanner. When reverse printing is off, the characters will print right side up.

Press **Change** to change reverse print status.

Press **Next** to advance to the next menu item.
Show Comm Status

Variables Where <Status> =
• On
• Off

Shown For All models, all modes except ES/ScanMark

Description This menu item allows you to either display or not display communication status. If you select “On,” characters appear in the display panel indicating communication status. The status indicators are:

• t for Transmitting
• r for Receiving
• b for Busy

Press Change to change the status.

Press Next to advance to the next menu item.

Power Saver

Variables Where <Time> =
• 5, 10, 15, 30, 45, 60, or Off

Shown For All models, all modes

Description This menu item allows you to change the power saver setting. The time shown indicates the amount of time that will elapse before the scanner goes into sleep mode.
Chapter 6: Using the Background Menu
Defaults Menu

Press **Change** to change the power saver time. The power saver time will:

- Cycle through 5, 10, 15, 30, 45, and 60 minute settings
- Reset to Off
- Start over at 5 minutes

**NOTE:** The default setting for the power saver is 15 minutes.

Press **Next** to accept the displayed setting and to advance to the next menu item.
Utilities Menu

The Utilities menu is the second of three submenus in the background menu. In it, you will find utility programs that allow you to calibrate the read head(s), view and set communications parameters, adjust the display brightness, turn on and off the leading edge skew check, and adjust the printer offset. See below for a full description of each menu item.

**NOTE:** Scantron recommends powering on the scanner for 10 minutes prior to running any calibration program.

**NOTE:** See “Background Menu Flowchart” on page 104 for a flowchart of the entire background menu items.

### Utilities

<table>
<thead>
<tr>
<th>Utilities Menu</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enter</td>
</tr>
</tbody>
</table>

**Shown For** All models, all modes

**Description** This menu item allows you to enter the Utilities menu.

Press **Enter** to enter the Utilities menu.

Press **Next** to advance to the Diagnostics menu (See “Diagnostics Menu” on page 126.)

### Top Head Calibrate

<table>
<thead>
<tr>
<th>Top Head Calibrate</th>
</tr>
</thead>
<tbody>
<tr>
<td>Run</td>
</tr>
</tbody>
</table>

**Shown For** All models, all modes
Chapter 6: Using the Background Menu
Utilities Menu

**Description**
This dialog allows you to run the top head calibration program.

Press **Next** to skip this function and to advance to the next menu item.

The following describes how to calibrate the top read head.

Calibration automatically adjusts the scanner read system to compensate for variations in scanner components, etc. Your scanner comes calibrated and ready for use.

You should calibrate if you have:

- Received a Recalibrate Scanner message on the scanner display
- Moved the scanner to a new location.
- Been instructed to do so by Scantron Customer Support.

For best results, perform the following before calibrating:

- Clean the scanner and the read heads. See Chapter 8, “Cleaning the Scanner” for details.
- Ensure that the calibration sheets are clean and undamaged.

Press **Run** to calibrate the top read head. The following menu item appears.

![Feed Sheet # 1 of 5](Quit)

**NOTE:** iNSIGHT 4ES scanners require ten calibration sheets for calibration.

**NOTE:** If you run out of calibration sheets, reload the ones that are in the output tray.
Chapter 6: Using the Background Menu
Utilities Menu

Load the calibration forms (part # 202-989-008) that came with your scanner by placing them in the input tray and depressing the Press To Load button. The orientation of the calibration sheets does not matter. Press Quit at any time to abort calibration.

When calibration is complete, the following menu item appears.

```
<table>
<thead>
<tr>
<th>Calibration Complete</th>
</tr>
</thead>
<tbody>
<tr>
<td>↓ Next ↓</td>
</tr>
</tbody>
</table>
```

Press Next to complete calibration and to advance to the next menu item.

### Bot Head Calibrate

```
<table>
<thead>
<tr>
<th>Bot Head Calibrate</th>
</tr>
</thead>
<tbody>
<tr>
<td>↓ Run ↓</td>
</tr>
<tr>
<td>↓ Next ↓</td>
</tr>
</tbody>
</table>
```

**Shown For**
All models except single read head scanners, all modes

**Description**
This menu item allows you to calibrate the bottom read head.

Press Next to skip this function and to advance to the next menu item.

For instructions on calibrating the bottom read head, refer to the instructions for Top Read Calibrate above.
Chapter 6: Using the Background Menu

↓Set↓  ↓Next↓
```

**Variables**
Where `<Scanner Model>` =
- ES/ScanMark

**Shown For**
All models, ES/ScanMark mode only

**Description**
This menu item allows you to set the communications parameters to the factory default. The factory default configuration is:

- Handshaking: None
- Command prefix: ASCII <ESC> (decimal 27)
- End-of-form: ASCII <CR> (decimal 13)
Chapter 6: Using the Background Menu
Utilities Menu

- Threshold: 42 (pencil), 30 (ink)
- Difference: 57 (pencil), 69 (ink)

**NOTE:** Because the scanner uses a virtual serial port connected through a USB port, baud rate, word length, stop bits, parity, and clear-to-send parameters no longer need to be set.

Press **Next** to advance to the next menu item.

Press **Set** to set the communications parameters to the default configuration shown above. A Comm Config Complete message will display. Press **Next** to complete communications configuration and to exit the Comm Configuration submenu.

**Config Sheet - Scan**

Press **Scan** to scan a configuration sheet. The following menu item appears.

Feed the Scantron Configuration Sheet by simply placing it in the input tray. It will automatically scan. A Comm Config Complete message will display. Press
Chapter 6: Using the Background Menu
Utilities Menu

Quit to complete communications configuration and to exit the Comm Configuration submenu.

Comm Config - Display

<table>
<thead>
<tr>
<th>Comm Config</th>
<th>Display</th>
<th>Next</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;Scanner Model&gt;</td>
<td>Display</td>
<td>Next</td>
</tr>
</tbody>
</table>

Variables Where <Scanner Model> =
- ES/ScanMark

Description This menu item allows you to display the communications configuration.

Press Next to skip this function and to advance to the next menu item.

Press Display if you want the scanner to display each of the communications parameters on the display panel. There are a total of 5 parameters.

Press Show Next to show the next parameter.

Press Next at any time to abort the function and advance to the next menu item in this menu.

Display Brightness

<table>
<thead>
<tr>
<th>Display Brightness</th>
<th>Change</th>
<th>Next</th>
</tr>
</thead>

Shown For All models, all modes

Description This menu item allows you to adjust the display brightness.

Press Next to advance to the next menu item.
Press **Change** to increment the display brightness until you find the best setting. When the brightness reaches its minimum, it resets to its maximum.

**Ldg Edge Skew**

<table>
<thead>
<tr>
<th>Ldg Edge Skew= Status &gt;</th>
</tr>
</thead>
<tbody>
<tr>
<td>Change</td>
</tr>
<tr>
<td>Next</td>
</tr>
</tbody>
</table>

**Variables**

Where `<Status>`=

- On
- Off

**Shown For**

All models, all modes

**Description**

This menu item allows you to turn leading edge skew detection on or off.

Leading edge skew detection checks to ensure that the leading edge of the sheet is aligned properly during scanning. It helps ensure that your data collection results are accurate.

However, if you are using forms that are not cut perfectly square, leading edge skew detection can result in unwanted error messages. If that occurs, this function allows you to turn leading edge skew detection off to suppress the errors. However, Scantron cannot guarantee the accuracy of the data collected when leading edge skew detection is turned off.

**NOTE:** The default setting for leading edge skew detection is “On.”

Press **Next** to advance to the next menu item.

Press **Change** to change the leading edge skew detection status.
Chapter 6: Using the Background Menu
Utilities Menu

Print Offset=

<table>
<thead>
<tr>
<th>Print Offset = &lt;Position #&gt;</th>
</tr>
</thead>
<tbody>
<tr>
<td>↓Change↓</td>
</tr>
<tr>
<td>↓Next↓</td>
</tr>
</tbody>
</table>

Variables
Where <Position #> =
- Whole numbers from -10 to +10

Shown For
OpScan 4ES with SelfScore and iNSIGHT 4ES with SelfScore models in SelfScore modes only

Description
This menu item allows you to adjust the printer offset. Printer offset is used in SelfScore mode and helps ensure that the error marks or answer verification marks are printed right next to the question.

Press Next to advance to the next menu item.

Press Change to increment the printer offset by one. Each time you press Change, the offset indicator number increments by 1 up to +10, then it resets to -10. Continue pressing Change until you have reached the setting that you want to test. Once you have chosen a setting, score a test to determine if the alignment is correct. Readjust as necessary.

NOTE: The default setting for print offset is 00.
Chapter 6: Using the Background Menu

Diagnostics Menu

The Diagnostics menu is the third of three submenus in the background menu. In it, you will find programs that allow you to test the printer, the Select Stacker, the top and bottom read heads, as well as the bar code reader. See below for a full description of each menu item.

NOTE: See “Background Menu Flowchart” on page 104 for a flowchart of the entire background menu.

Diagnostics Menu

<table>
<thead>
<tr>
<th>Shown For</th>

</thead>
<tbody>
<tr>
<td>Description</td>
<td>This menu item allows you to test the scanner’s feed and print capabilities. The test feeds sheets loaded in the input tray, and, if printing is on, the installed printer(s) print a string of characters.</td>
</tr>
</tbody>
</table>
Chapter 6: Using the Background Menu
Diagnostics Menu

Press **Next** to skip this test and to advance to the next menu item.

Press **Run** to proceed with the test. The following menu item appears.

```
Feed/Print
↓Start↓ ↓Next↓
```

Load an expendable form or two into the input tray.
(Do not use the calibration sheets that came with your scanner as you may need these in the future.)

Press **Start** to scan the sheet(s). The sheet should feed and each installed printer should print a string of characters. The test will continue as long as there are sheets in the input tray.

Press **Next** if you wish to abort the test or if you have completed the test. You will be advanced to the next menu item.

**Feed/Select**

```
Feed/Select
↓Run↓ ↓Next↓
```

**NOTE:** This menu item only appears if a Select Stacker is connected to the scanner.

**Shown For**
All models, all modes (if the Select Stacker is installed and connected)

**Description**
This menu item allows you to run a test of the scanner’s feed and select capabilities. This test feeds sheets loaded in the input tray and places them alternately into the top and bottom trays of the Select Stacker.

Press **Next** to skip this test and to advance to the next menu item.
Chapter 6: Using the Background Menu
Diagnostics Menu

Press Run to proceed with the test. The following menu item appears.

| Feed/Select | ↓Start↓ | ↓Next↓ |

Load a stack of forms into the input tray of the scanner. (The forms will be reusable upon completion of the test.)

Press Start to feed sheets. The Select Stacker passes the test if sheets are placed alternately into the top and bottom trays of the Select Stacker.

Press Next if you wish to abort the test or if you have completed the test. You will be advanced to the next menu item.

Top Read Validation

| Top Read Validation | ↓Run↓ | ↓Next↓ |

Shown For: All models, all modes

Description: This menu item allows you to validate the calibration and operation of the top read head.

NOTE: This test requires Scantron Reflective Calibration sheets (part number 202-171-989).

Press Next to skip this test and to advance to the next menu item.

Press Run to proceed with the test. The following menu item appears.

| Feed Sheet # 1 of 5 | ↓QUIT↓ | ↓START↓ |
Chapter 6: Using the Background Menu
Diagnostics Menu

Place a stack of five, Scantron Reflective Calibration Sheets (part number 202-171-989) into the input tray so that the words “Scantron Reflective” are on top and enter the scanner first.

Press QUIT to abort the test. Press START to perform the test. The scanner scans the sheets. If the scanner passes the test, the following menu item appears.

Read Validation OK

Press Next to advance to the next menu item.

If the scanner fails the test, the following three menu items appear.

Read Validation

Retry

Next

Failed.....

Retry

Next

x = y

Retry

Next

Where x =

• Paper

• Light Mark

• Dark Mark

and y = hex value (0-9 and A-F)

If the scanner fails the test, first ensure that the calibration sheets are not dirty or damaged. If they are not, clean the scanner read head, then retest by pressing Retry. If the scanner still fails the test after these measures, contact Scantron Customer Support as described in “Product Support and Services” on page 157.
Chapter 6: Using the Background Menu

Diagnostics Menu

Press **Next** to exit the test and to advance to the next menu item.

**Bot Read Validation**

<table>
<thead>
<tr>
<th>Bot Read Validation</th>
</tr>
</thead>
<tbody>
<tr>
<td>↓Run↓</td>
</tr>
<tr>
<td>↓Next↓</td>
</tr>
</tbody>
</table>

**NOTE:** This menu item displays only if your scanner is equipped with a bottom read head.

**Shown For**

All models, all modes (if equipped with a bottom read head)

**Description**

This menu item allows you to validate the calibration and operation of the bottom read head.

Refer to the instructions for Top Read Validation above with the following exception:

Place the Calibration Sheets in the input tray so that the words “Scantron Reflective” are **face down and enter the scanner last**.

**Bar Code Test**

<table>
<thead>
<tr>
<th>Bar Code Test</th>
</tr>
</thead>
<tbody>
<tr>
<td>↓Run↓</td>
</tr>
<tr>
<td>↓Next↓</td>
</tr>
</tbody>
</table>

**NOTE:** This menu item displays only if the bar code reader option is installed.

**Shown For**

All models, all modes (if bar code reader is installed)

**Description**

This menu item allows you to run the bar code test.

Press **Next** if you want to skip this function and advance to the next menu item.
Chapter 6: Using the Background Menu
Diagnostics Menu

Press Run if you want to run the test. The following menu items appear.

<table>
<thead>
<tr>
<th>BAR CODE TEST</th>
</tr>
</thead>
<tbody>
<tr>
<td>↓Run↓</td>
</tr>
<tr>
<td>↓Next↓</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>INPUT TRAY EMPTY</th>
</tr>
</thead>
<tbody>
<tr>
<td>↓Quit↓</td>
</tr>
<tr>
<td>↓Start↓</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>FEED BAR CODE FORMS</th>
</tr>
</thead>
<tbody>
<tr>
<td>↓Quit↓</td>
</tr>
<tr>
<td>↓Start↓</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>#91892</th>
</tr>
</thead>
<tbody>
<tr>
<td>↓Quit↓</td>
</tr>
<tr>
<td>↓Start↓</td>
</tr>
</tbody>
</table>

Load a stack of five Bar Code Diagnostic Forms #91892 (part # 202-167-144) into the input tray. Once the forms are loaded the Start prompt appears.

Set the bar code reader to the position that you want to test. Notice that there are lines of bar code labels at positions 25, 30, 53, 62, 67, 75, and 80.

For a recommended test procedure and details on how to interpret the test, see “Testing the Bar Code Reader” on page 201.

Press Start to perform the test. If all the bar code labels are read successfully, there is no change to the menu items.

Press Next to abort the test or if you have completed the test and wish to advance to the next menu item.
If the bar code test failed, the following menu items appear.

**BAR CODE TEST FAILED**

↓ Quit ↓ ^ Start ↓

**X LABEL(S) READ**

↓ Quit ↓ ^ Start ↓

Where X = the number of labels read successfully in the line that you were reading.

If you have a failure:

- Check for damaged sheets
- Verify that you have placed the bar code form correctly in the input tray
- Verify that the bar code reader cover is in the full down position
- Verify that the reader is properly positioned

If you get repetitive failures and have checked the above, contact Scantron Customer Support as described in “Product Support and Services” on page 157.

Press **Continue** to run another test.

Press **Next** to abort the test and advance to the next menu item.
Exiting the Background Menu

<table>
<thead>
<tr>
<th>Background Menu</th>
</tr>
</thead>
<tbody>
<tr>
<td>↓Enter↓</td>
</tr>
<tr>
<td>↓Exit↓</td>
</tr>
</tbody>
</table>

**Shown For**  All models, all modes

**Description**  After you have navigated through the background menu, the menu item shown above appears.

Press **Enter** to re-enter the background menu.

Press **Exit** to exit the background menu.
NOTES
Chapter 7: ES/ScanMark Emulation

Running the scanner in ES/ScanMark mode makes the scanner function like a Scantron ES 2010, ES 2260, or ES 2800 scanner so that you can use your legacy Scantron software and applications with your new scanner. You can even create new form definitions with your legacy software. Most of the instructions found in this manual still pertain when using the scanner in ES/ScanMark mode. This chapter highlights the differences.
Chapter 7: ES/ScanMark Emulation
Selecting ES/ScanMark Mode

Selecting ES/ScanMark Mode

Select the ES/ScanMark mode to make the scanner function like a Scantron ES 2010, ES 2260, or ES 2800 scanner.

1. Enter the background menu by holding both buttons until the background menu appears (about five seconds).

2. Press Next twice to get to the Mode menu item. The following display appears.

   ![Mode Selection Screen]

   Where <Mode> =
   - OMR w Imaging (optional)
   - OMR Only
   - ES/ScanMark
   - Download Run
   - Download Debug
   - SelfScore (optional)
3. Press **Change** until **Mode=ES/ScanMark** appears in the display.

4. Press **Next** three times to get to the Background Menu item.

5. Press **Exit** to exit the background menu. The scanner is now ready for operation in ES/ScanMark mode.
Set Up, Configure, and Operate the Scanner

Setup and operation of your scanner in ES/ScanMark mode is the same as for other operating modes. Refer to the following chapters for instructions on setting up, configuring, and operating your scanner.

- Chapter 2, "Setting Up Your Scanner"
- Chapter 6, “Using the Background Menu”
- Chapter 3, “Operating Your Scanner”
Display Panel Messages

Explanations of the display panel messages that appear while in ES/ScanMark mode can be found in Chapter 5, “Display Panel Messages”. The ES/ScanMark messages are listed alphabetically along with messages displayed in other modes.
Chapter 7: ES/ScanMark Emulation
Detecting Double Sheets

Detecting Double Sheets

Use the double-sheet detection option to have the scanner detect when more than one form enters the scanner. If you turn double sheet detection on and the scanner detects multiple forms entering the scanner, **Double Sheet** appears on the display panel and the scanning session pauses. You then must clear the paper path to resume scanning.

For information on how to turn on double-sheet detection, see Chapter 6, “Using the Background Menu” for information on how to enter the background menu, and then see “Double Sheet” on page 109 for information on how to turn on double-sheet detection.

To clear a double-sheet error condition

1. If the scanner detects multiple forms entering the scanner, the display panel displays one of the following messages.

   | -ES/ScanMark-
   | Double Sheet \Cont\

   | -User Program-
   | Double Sheet \Cont\

2. Clear the paper path, being sure to get all the pieces if the form has torn.

3. Return any unscanned sheets to the input tray.

Press **Cont** to continue.
Form Handling

The OpScan 4ES and iNSIGHT 4ES scanners can perform form handling using the optional Select Stacker. For information on how to attach and use the Select Stacker, see Appendix D, “Select Stacker”.
Scoring Forms

Some ScanMark scanners had a special scoring mode that would score and error mark form number F-16457-PAR-L. The OpScan 4ES and iNSIGHT 4ES scanners in ES/ScanMark emulation mode do not have that special scoring mode.

However, some software applications that can be used with the OpScan 4ES and iNSIGHT 4ES scanners in ScanMark emulation mode (e.g. ParScore) can score and print the score on the forms. See your software documentation for details.
Chapter 8: Cleaning the Scanner

This chapter covers how to clean your OpScan 4ES or iNSIGHT 4ES scanner to keep it in top operating condition.
Chapter 8: Cleaning the Scanner

Schedule

In general, it is best to clean your scanner once a month. However, you may need to clean your scanner’s read heads more frequently depending on the following:

- **Scanner operation** - A scanner operating in OMR w Imaging mode (optional) may need to be cleaned more often than a scanner operating in OMR Only mode.
- **Paper dust** - Sheets that generate more paper dust will necessitate more frequent cleaning. Perforated sheets generate a considerable amount of paper dust.
- **Read head contamination** - Eraser fragments and white out, if used, can build up on the read head.
Chapter 8: Cleaning the Scanner

Supplies

Supplies

Recommended cleaning supplies are shown below.

- Ammonia-based glass-cleaning solution (do not spray directly on the scanner)
- Static reducing spray (do not spray directly on the scanner)
- Lint-free cloths
- Canned air (with non-condensing propellant)
**Chapter 8: Cleaning the Scanner**

**Procedure**

**IMPORTANT:** Turn the scanner off before cleaning.

An illustration to help you identify key parts that need to be cleaned is shown below. The recommended cleaning procedure follows.
Chapter 8: Cleaning the Scanner

Procedure

1. Raise the covers for the read head and sheet deflector and remove the printer cover.

2. Spray canned air (with a non-condensing propellant) directly on the transport bed area. This removes large amounts of dust and other types of debris.
Chapter 8: Cleaning the Scanner

Procedure

3. Clean out any dust or debris that has collected in the area between the top and bottom read heads where it is hinged using canned air.

   **CAUTION:** Do not use the canned air after this step as it can blow dust on areas that have been cleaned.

4. Lightly dampen a lint-free cloth with water or with a static-reducing spray.
5. Using the dampened cloth, wipe along the transport bed. Start at one end of the bed and work to the other.

6. Lightly dampen a lint-free cloth with soapy water.

7. Locate the drive rollers. Wipe the drive rollers using the lightly dampened cloth.

**CAUTION:** Do not touch the read head with the soapy cloth. Soap can damage the read head.
Chapter 8: Cleaning the Scanner

Procedure

8. Locate the pick roller. Turn the pick roller with one finger, wiping off the roller as you turn it. This procedure removes graphite and other debris that collects on the roller.

9. Lightly dampen a fresh lint-free cloth with an ammonia-based glass cleaner.

   **CAUTION:** Do not spray the cleaner directly on the read head.

10. Using the lightly dampened cloth, clean the glass on the top read head.

11. Using the same cloth, clean the glass on the bottom read head.

   **NOTE:** Single read head units do not have glass beneath the top read head. Instead, they have a black shiny strip.
Chapter 8: Cleaning the Scanner
Procedure

12. Close the read head and sheet deflector. Also replace the printer cover.

13. Turn the scanner back on after it has had a chance to dry.
Chapter 9: Troubleshooting

Use the troubleshooting chart in this chapter to diagnose any issue you encounter with your scanner. If you are still unable to resolve the problem, contact Scantron Customer Support as described in “Product Support and Services” on page 157.

**NOTE:** For optional components, see the appropriate appendix for troubleshooting information.

**NOTE:** For information regarding error messages, see Chapter 5, “Display Panel Messages”.

Hardware Support

Call
For Scantron scanners, call 1-800-338-5544.
For all other hardware support, call 1-800-228-3628.
Outside the U.S.
Contact your local sales agent.

Email
ScantronHelp@scantron.com

Before contacting Technical Support, gather the following information:

- Customer number: listed on the shipping documents
- Serial number and model number (located on the side or back of the scanner)
- Type of computer and the operating system you are using with the scanner (PC, Mac, etc.)
- Sheet count: determining sheet count will vary depending on your scanner. Refer to the procedure documented in your Operator's Guide.
- A description of the problem, including
  - The steps to reproduce it and whether you can determine the source of the problem based on its symptoms
  - Any pertinent information related to the problem, such as error messages or sample output

Software Support

The Scantron Technical Support Department can provide product support in a variety of ways.

Call
(800) 445-3141 between 7:30 A.M. and 6:30 P.M., Central Time, Monday through Friday.
Chapter 10: Product Support and Services

Before contacting Technical Support, gather the following information:

- Type of computer and the operating system you are using
- Steps required to reproduce the problem

Website/Email
www.scantron.com
support@scantron.com.

**Live Chat**

You can also choose GoToAssist Live Chat, an instant messaging solution, for Technical Support. Live Chat is available during Technical Support’s normal business hours.

1. Go to [www.scantron.com/software-support-live-chat-key/](http://www.scantron.com/software-support-live-chat-key/)
2. Complete the form under ”Request Support Using Live Chat.”
3. Click **Continue**.
Chapter 10: Product Support and Services

NOTES
Appendix A: Recalibration

Calibration automatically adjusts the scanner read system to compensate for variations in scanner components. Your scanner comes calibrated and ready for use.

Reasons to Recalibrate

Recalibration should be performed only if you received a “Recalibrate.... See Manual” message on the scanner display panel or if instructed to do so by Scantron Customer Support.

NOTE: Do not recalibrate unless required to do so. Recalibrating too often can produce less than optimal results.

Procedure Overview

To recalibrate, perform the following:

- Prepare for recalibration
- Navigate the background menu
Chapter : Recalibration

- Perform a Top Head Calibrate function
- Perform a Bot Head Calibrate function (if your scanner is equipped with a bottom read head)
- Exit the background menu

Instructions for the above tasks are found in the pages that follow.
Preparing for Recalibration

For best results, perform the following before calibrating:

- Clean the scanner and the read head(s) as outlined in Chapter 8, “Cleaning the Scanner”.
- Ensure that the calibration forms are clean and undamaged.

**NOTE**: Scantron recommends powering on the scanner for 10 minutes prior to running any calibration program.
Navigating the Background Menu

In order to recalibrate, you need to navigate the background menu to get to the Top Head Calibrate and Bot Head Calibrate functions. Use the following procedure.

1. Enter the background menu by holding down both buttons for about five seconds. When the message "Background Menu" appears briefly, release the buttons.

2. Press Next five times or until you reach this menu item.

```
Utilities Menu
↓Enter↓      ↓Next↓
```

3. Press Enter to enter the Utilities submenu. The first menu item displayed is the one you need (shown below).

```
Top Head Calibrate
↓Run↓      ↓Next↓
```
Top Head Calibration

From the menu item shown below, perform a top read head calibration using the following instructions.

Top Head Calibrate
↓Run↓  ↓Next↓

1. Press Run to calibrate the top read head. The following menu item appears.

Feed Sheet # 1 of 5
↓Quit↓

**NOTE:** iNSIGHT 4ES scanners require ten calibration sheets for calibration.

**NOTE:** If you run out of calibration sheets, reload the ones that are in the output tray.

2. Load the calibration forms (part # 202-989-008) that came with your scanner by placing them in the input tray and depressing the **Press To Load** button. The orientation of the calibration sheets does not matter. Press **Start** to begin calibration. Press **Next** at any time to abort calibration.

3. When calibration is complete, the following menu item appears.

Calibration Complete
↓Next↓

4. Press **Next** to complete calibration and to advance to the next menu item.
Bottom Head Calibration

**NOTE:** Single read head scanners have only a top read head. If your scanner has a single read head, skip this part of the procedure.

```
Bot Head Calibrate
↓Run↓        ↓Next↓
```

From the menu item shown above, perform a bottom read head calibration using the Bot Head Calibrate function. Use the instructions for the Top Head Calibrate function to guide you through the process.
Exiting the Background Menu

1. Press **Next** until you reach the following menu item.

   ![Background Menu](Background Menu diagram)

2. Press **Exit** to exit the background menu.
Appendix B: Transport Printer

This chapter covers setting up and using the optional transport printer(s) for the OpScan 4ES and iNSIGHT 4ES scanners.

Both single and dual printers are available.

IMPORTANT: Remove the cartridge from the printer and store in a sealed container in a cool place if:

- The printer is not going to be used for a period greater than two weeks.
- The scanner is going to be transported.
- The scanner is going to be turned off or unplugged (It is not necessary to remove the cartridge when allowing the scanner to go into low power sleep mode.).
Chapter : Transport Printer
Printer Features

Prints in any position horizontally across a sheet. You can adjust the printer cartridge so it prints at any position on a sheet—from just beneath the guide edge to the top scoring position.

Prints a maximum of 23 characters—10 characters per inch.

Prints in only the last 2.44 inches of space on a sheet.

Since the sheet is scanned first, most of the sheet has passed under the print head by the time interactive printing begins. Only the last 2.44 inches on a sheet are available for printing.

**NOTE:** When in optional SelfScore mode, the printers can print on the entire sheet.

Prints in normal or reverse orientation (characters can appear right side up or upside down).

See “Reverse Printing” on page 110 of this manual, for instructions on how to set up the option for reverse printing orientation on your scanner.
Getting Started

To prepare your scanner for printing while scanning, perform the following:

- Install the printer cartridge(s)
- Position the printer(s)
- Turn on the printer(s)
- (optional) Test the printer(s)
- Set up your scanning software to print

Instructions for each of these tasks are found in the sections that follow.
Installing or Replacing Ink Cartridges

NOTE: The scanner does not come with the ink cartridge(s) installed.

To install or replace an ink cartridge, follow these steps:

1. Unlatch the printer cover and remove it.

2. If replacing a used cartridge, remove it by holding the printer cartridge tab and pivoting the used cartridge out of the cartridge holder.

3. Prepare the new cartridge.
• Remove the new cartridge from the box and peel off the tape that covers the ink cartridge nozzles.
• Be careful to not touch the cartridge contacts with your fingers.

4. Install the new cartridge.

Slide the cartridge into the cartridge holder “feet first” then press the top of the cartridge firmly into the cartridge holder until you feel two clicks. This ensures that the cartridge is fully seated.
5. If your scanner is equipped with dual printers, repeat steps 2, 3, and 4 for the other printer.

6. Adjust the position of the printer(s) as described in the next section.
Positioning the Printer(s)

1. If the printer cover is not already removed (from a previous procedure) unlatch it and remove it.

2. Notice the location of the cartridge holder that is inside the printer assembly. Also notice the ruler, the printer alignment mark, and the thumbscrew that sit beside the cartridge holder. These are the elements used to position the printer(s).
3. Select the sheets you want to print on.

**Printing on Any Form**
Using a ruler with marks for tenths of an inch, align the ruler with the left edge of a sheet on which you want to print. Measure to the location on the sheet where you want your printing to appear. Use this measurement to position the printer.

**Printing on SelfScore Forms**
If you are using SelfScore forms, you need to adjust the printers to 1.6 and 4.3 inches. There are small triangles on the scanner printer ruler indicating these two locations.

**NOTE:** The remainder of this section demonstrates how to set the printers to 1.6 and 4.3 inches. However, these concepts can be applied to any form by simply using the measurement you obtained above.

4. Check the printer(s) to see if they are in the correct position. If not, use the following steps to position the printer(s).
5. Loosen the thumbscrew so that you can move the printer.

6. Move the printer to the desired position and lightly tighten the thumbscrew.
7. If your scanner is equipped with dual printers, adjust the position of the second printer.

8. Replace the printer cover, making sure that it is firmly seated.

9. Ensure that the printer is turned on and perform a printer test using the instructions in the sections that follow.
Turning the Printer(s) On Or Off

You can turn the printer(s) on or off using the background menu. This allows you turn off printing without having to remove the printer cartridge.

**NOTE:** If you are setting up printing for the first time, you should check to verify that the printer is turned on.

Use the following procedure to change the printer status.

1. Hold down (at the same time) the left and right buttons found under the display panel for about five seconds to enter the background menu. When the Background Menu message appears briefly, release the buttons.

**NOTE:** For a complete listing of all background menu items, see Chapter 6, “Using the Background Menu”.
Chapter : Transport Printer
Turning the Printer(s) On Or Off

2. Press the **Next** button three times or until you reach the following menu item.

```
Defaults Menu
↓Enter↓    ↓Next↓
```

3. Press **Enter** to enter the Defaults menu.

4. Press **Next** two times or until you reach the following menu item.

```
Printer=<Status>
↓Change↓    ↓Next↓
```

Where <Status> =
- On
- Off

5. To print, the printer status should be On. To suppress printing, the status should be Off. Press **Change** if you want to change the printer status.

6. Once you have the printer status set the way you want it, press **Next** seven times or until you reach the following menu item.

```
Background Menu
↓Enter↓    ↓Exit↓
```

7. Press **Exit** to exit the background menu.
Testing the Printer(s)

To test the printer, perform the following steps:

1. Load five expendable 8.5 by 11-inch data collection sheets in the input tray. (Do not use Calibration Sheets as you may need them in the future.)

2. Hold down (at the same time) the left and right buttons found under the display panel for about five seconds to enter the background menu. When the Background Menu message appears briefly, release the buttons.

3. Press the Next button five times or until you reach the following menu item.

   Diagnostics Menu
   ↓Enter↓  ↓Next↓

4. Press Enter to enter the Diagnostics menu. The following menu item appears.

   Feed/Print
   ↓Run↓  ↓Next↓

5. Press Run to run the Feed/Print test.
For the printer(s) to successfully pass the test, sheets must feed through the scanner and the printer(s) must print characters on the sheets. As the sheets move through the scanner, the following message is displayed:

```
Feed/Print
↓Start↓  ↓Next↓
```

6. If the printer prints on the sheets, press Next until the following menu item appears.

```
Background Menu
↓Enter↓  ↓Exit↓
```

Press Exit to exit the background menu

If the printer does not print on the sheets, verify that you have installed the ink cartridge as directed and have turned the printer on. Repeat the testing procedure.

If printing still does not appear, call Scantron Customer Support for assistance as described in “Product Support and Services” on page 157.
Set Up Scanning Software for Printing

In order to print, your scanning software must tell the scanner printer(s) what to print. This requires proper setup of the scanning software for printing. For information regarding how to do this, consult your scanning software documentation.
Chapter: Transport Printer
Cleaning the Cartridge Holder

Cleaning the Cartridge Holder

If ink leaks from the cartridge, it may be necessary to clean the cartridge holder.

**NOTE:** Perform this procedure only if you are experiencing problems. You can damage the electrical contacts in the cartridge holder if you clean them too frequently.

To clean the cartridge holder:

1. Unlatch the printer cover and remove it.

2. Remove the cartridge by holding the printer cartridge tab and pivoting the used cartridge out of the cartridge holder.
CAUTION: Watch for excess ink on the cartridge that can soil your hands, clothes, or other items.

3. Using a clean swab, gently wipe the area of the cartridge holder that contains the electrical contacts.

CAUTION: Do not spray any substance directly into or on the cartridge holder.

4. Install the cartridge. Slide the cartridge into the cartridge holder “feet first” then press the top of the cartridge firmly into the cartridge holder until you feel two clicks. This ensures that the cartridge is fully seated.
Troubleshooting

Use the following table to troubleshoot most printer problems. If after trying the table, you are not able to resolve your difficulty, contact, Scantron Customer Support as described in “Product Support and Services” on page 157.

<table>
<thead>
<tr>
<th>If you have:</th>
<th>Do the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>A cartridge that is leaking ink</td>
<td>Replace the cartridge and clean the cartridge holder.</td>
</tr>
<tr>
<td></td>
<td><strong>NOTE:</strong> If the scanner is operating in an excessively hot location [above 85° F.] or if it is not going to be used for an extended period of time, remove the cartridge from the scanner. Store the cartridge in a sealed container and place the container in a cool, dry location, such as inside a refrigerator.</td>
</tr>
<tr>
<td>A printer that previously printed but now does not print</td>
<td>Replace the cartridge.</td>
</tr>
<tr>
<td>Letters that are blurred or in a double image</td>
<td>Replace the cartridge if the quality of printing does not improve.</td>
</tr>
<tr>
<td>Letters that are not printing completely</td>
<td>Check to see if ink is accumulating on the silver plate on the bottom of the cartridge. If so, remove the ink using a dry, lint-free cloth. Clean the contacts on the cartridge holder.</td>
</tr>

<thead>
<tr>
<th>If you have:</th>
<th>Do the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>No printing at all</td>
<td>Ensure that you have turned on the printer using the background menu. Also, consult the documentation that supports the software application that you have installed on your computer.</td>
</tr>
<tr>
<td>Not used your printer for a long time</td>
<td>Replace the ink cartridge. <strong>NOTE:</strong> If the scanner is not going to be used for an extended period of time, remove the cartridge from the scanner. Store the cartridge in a sealed container, and place the container in a cool, dry location, such as inside a refrigerator.</td>
</tr>
</tbody>
</table>
Appendix C: Bar Code Reader

The bar code reader is an optional attachment that enables the scanner to collect data from bar codes attached to or imprinted on a sheet you scan. The scanner communicates this data to the computer to which it is attached. The bar code data collected from each sheet is processed by the scanning software and is stored in the same ASCII data record as your OMR bubble data.

This chapter covers the components, setup, use, and troubleshooting of the bar code reader.
Chapter : Bar Code Reader

Components

The bar code reader is positioned on top of the scanner’s transport bed. It sits to the right of the read head (as viewed from the front of the scanner) and beneath the sheet deflector. The figure below shows the location of the bar code reader.

The bar code reader has three parts major parts. These parts are:

- Index Bar
- Sensor Head
- Sensor Pointer
Each of these parts is illustrated and described below.

**Index Bar**

The index bar is located on top of the cover of the bar code reader. It resembles a ruler and spans the width of the transport bed below.

The index bar shows ruled markings in tenths of inches, measured from the guide edge of the scanner. It shows numbers marked every half inch, beginning at 1.5 inches and ending at 8.0 inches.

**Sensor Head**

The sensor head is located on the underside of the sheet deflector. It contains a sensor that reads bar codes on each sheet as the sheet passes through the scanner.

**Sensor Pointer**

The sensor pointer is located on top of the cover of the bar code reader. It indicates, through its position on the index bar, the location of the sensor head. It is
Chapter : Bar Code Reader
Components

used to set the sensor head to the proper position for scanning bar codes.
The bar code reader reads six types of bar code formats. The table below summarizes some of the important features of each type.

<table>
<thead>
<tr>
<th>Code</th>
<th>Type</th>
<th>Character Set</th>
<th>Character Representation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Codabar</td>
<td>Alphanumeric (limited)</td>
<td>0 through 9, -, $, :, ., +, A, B, C, and D</td>
<td>Start and stop characters for code are A, B, C, and D.</td>
</tr>
<tr>
<td>Code 128 Versions A, B³ and C</td>
<td>Alphanumeric</td>
<td>ASCII 128 characters (0 through 7F)</td>
<td>ASCII character set</td>
</tr>
<tr>
<td>European Article Numbering Code (EAN) 8 and 13</td>
<td>Numeric (and fixed length)</td>
<td>0 through 9</td>
<td>EAN 8 is 8 characters and EAN 13 is 13 characters.</td>
</tr>
<tr>
<td>Interleaved 2 of 5 Code (125)</td>
<td>Numeric</td>
<td>0 through 9</td>
<td>Each character is represented by a series of 5 bars and/or spaces.</td>
</tr>
</tbody>
</table>
## Chapter: Bar Code Reader

### Read Capability

<table>
<thead>
<tr>
<th>Code</th>
<th>Type</th>
<th>Character Set</th>
<th>Character Representation</th>
</tr>
</thead>
<tbody>
<tr>
<td>3 of 9 Code (Code 39)</td>
<td>Alphanumeric</td>
<td>0 through 9 A-Z, -, .., /, +, %, and space</td>
<td>Each character is represented by 5 bars and 4 spaces. Three of the 9 bars or spaces are wide (binary value of 1); six of the 9 bars or spaces are narrow (binary value of 0). Start and stop character for the code is an asterisk (*).</td>
</tr>
<tr>
<td>Universal Product Code (UPC), versions A (UPC-A) and E (UPC-E)</td>
<td>Numeric (commonly used on retail products)</td>
<td>0 through 9</td>
<td>Each character is represented by 2 dark bars and 2 spaces of varying widths. Version A (regular version of UPC) contains 12 positions: 10 numeric and 2 control characters. Version E allows for smaller code by suppressing zeros that occur within the code.</td>
</tr>
</tbody>
</table>

- Lowercase “a”, “b”, “c”, “d”, and “s”, are reserved for OpScan 4ES and iNSIGHT 4ES scanner use. Code 128 B cannot be used to encode data which includes these characters. These characters are defined by Scantron and cannot be changed.

### NOTES:

- The bar code reader cannot read bar codes that produce some ASCII codes. Refer to the technical reference manual for more information.
- Bar codes with lower case characters cannot be used with Scantron software.
- With vertical alignment, you can place six types of bar code format on the top side of a sheet. Each code can have a different format.
• The bar code reader reads all bar codes on a sheet in a single pass (scan). You can print bar codes directly on a sheet or print them on a label that is attached to a sheet.

• More information is available on some bar codes. Refer to the publications that follow for information on:

• More information is available on reading bar codes using your scanner. Refer to the following document:
  Technical Reference Manual for the OpScan iNSIGHT 2 and iNSIGHT 4 Scanners

**NOTE:** The *Technical Reference Manual for the OpScan iNSIGHT 2 and iNSIGHT 4 Scanners* must be ordered separately.
Scanning Bar Codes

The procedure for using the bar code reader is not very different from normal scanning. If you understand the basic scanning process outlined in Chapter 3, “Operating Your Scanner”, you’ll have no trouble collecting bar code data.

To read bar codes on sheets, use the following procedure:

1. Determine the location of the bar codes on the material you are scanning.
   - The sheet may be imprinted with an indicator number (the distance from the guide edge of the sheet to the center of the bar code). If it is, you can simply use that number.
   - If you do not find an indicator number, use a ruler with marks for tenths of an inch to measure the distance from the guide (left) edge of the sheet to the center of the bar code. Measure to the nearest tenth of an inch.

**NOTE:** The ruler measurement is the indicator number. (For example, if the measurement is 3.5 inches, the indicator number is 3.5.)
2. Locate the number on the index bar that matches the indicator number you found in step 1. Slide the sensor head along the index bar until the sensor pointer lines up with the indicator number.

3. Scan bar coded sheets the same way as you would any others. See “Scanning Procedure” on page 38 for details.

   **IMPORTANT:** Bar codes must be on the top side of the sheet as you scan it.

4. Use your ScanTools scanning software on the host computer to begin scanning. Your scanning software must be able to accept bar code data.

   **NOTE:** If you need an explanation of any messages shown on the display panel, see Chapter 5, “Display Panel Messages”.
Troubleshooting

To diagnose a problem that you are having with your bar code reader, use the procedure below.

1. Verify that the configuration in your scanning software is set for bar code (e.g., in ScanTools, make certain that the Bar Code option on the Scanner Configuration dialog is enabled). Consult your software documentation if you are uncertain how to proceed.

2. Verify that the bar code reader sensor is positioned to read the center of the bar code as it travels through the scanner. Do this by measuring from the guide (left) edge of the sheet to the center of the bar code. Then set the sensor pointer to that indicator number.
3. Check the scan path on the sheet. Make sure that there are no stray marks, black marks or printing in the scan path that leads to or from the bar code.

4. Make certain that the read head, printer (optional), and bar code reader covers are down and tightly closed.

5. Examine the bar code on the sheet you are trying to scan. Make sure that:
   - The bar code does not have any worn spots.
   - The bar code appears to be printed correctly on the sheet.
   - The ink on the bar code is dark and consistent across the code.
Chapter : Bar Code Reader
Troubleshooting

- The edges of the label are not frayed or lifted (if the bar code is a label).
- The label is affixed in the proper spot and aligned parallel to the guide edge (if the bar code is a label).

6. Test the function of the bar code reader using the procedure in the section that follows.
Testing the Bar Code Reader

Bar Code Diagnostic Form

Use bar code diagnostic form #91892 shown below with the testing procedure that follows.

NOTE: Scantron forms are changed from time to time. The appearance of Bar Code Diagnostic Form #91892 as shown below may differ slightly from the one that was shipped with your bar code reader.
Using the Bar Code Test Function

This section explains how to use the Bar Code Test function. Once you understand this section, go to the next section to test your bar code reader.

1. Load a stack of bar code diagnostic forms in the input tray.

2. Position the bar code reader on one of the positions on the form.

3. Hold down (at the same time) the left and right buttons found under the display panel for about five seconds to enter the background menu. When the Background Menu message appears briefly, release the buttons.

4. Press the Next button five times or until you see the following menu item.

   **Diagnostics Menu**
   
   ↓Enter↓  ↓Next↓

5. Press Enter to enter the diagnostics menu.
6. Press **Next** three times or until you see the following menu item.

   ![](bar_code_test.png)

   **Bar Code Test**
   
   ↓Run↓  ↓Next↓

7. Press **Run** to run the bar code test.

   The bar code reader is reading correctly as long as the sheets continue to feed through the scanner.

   If all sheets are read successfully, the bar code reader has passed the test and the following messages appear:

   ![](bar_code_test_passed.png)

   **BAR CODE TEST**
   
   ↓Run↓  ↓Next↓

   If the input tray is empty, the following three messages appear:

   ![](input_tray_empty.png)

   **INPUT TRAY EMPTY**
   
   ↓Quit↓  ↓Start↓

   ![](feed_bar_code_forms.png)

   **FEED BAR CODE FORMS**
   
   ↓Quit↓  ↓Start↓

   ![](91892.png)

   **#91892**
   
   ↓Quit↓  ↓Start↓

   Reposition the sensor and press **Start** to run another test, or press **Quit** to end the test.
Chapter: Bar Code Reader
Testing the Bar Code Reader

If the bar code test fails, the following messages appear:

BAR CODE TEST FAILED
↓Quit↓↓Start↓

X LABEL(S) READ
↓Quit↓↓Start↓

Where X is the number of labels read successfully.

If you have a failure:

• Check for damaged sheets
• Verify that you have placed the bar code form correctly in the input tray
• Verify that the bar code reader cover is in the full down position
• Verify that the reader is properly positioned

If you get repetitive failures and have checked the above, contact Scantron Customer Support.

Press Start to repeat the test, or press Quit to end the test.

Testing the Bar Code Reader

Now that you know how to use the Bar Code Test function, use the testing sequence described below to test your bar code reader.

1. Scan position 25, then scan position 80.

   If your bar code reader can read both positions 25 and 80 correctly, the problem lies with your bar codes—not with your bar code reader.

   If your bar code reader can read either position 25 or 80 correctly—but not the other, the problem usually lies with the bar codes or with the depth of field on the bar code reader. (The depth of field
Chapter: Bar Code Reader
Testing the Bar Code Reader

problem is caused by the sensor head not being positioned the correct distance from the sheet or form that is in the transport bed.)

Make certain that the sheet deflector on the scanner is in the full down position. If you can’t resolve the issue, continue with step 2.

NOTE: Positions 25 and 80 contain bar codes that are 7 thousandths of an inch wide—the most difficult to read. If the bar code reader can read both positions 25 and 80 correctly, other positions on the diagnostic sheet should also read correctly.

2. If your bar code reader cannot read positions 25 and 80, try scanning positions 30 and 75.

If your bar code reader cannot read positions 30 and 75 there may be a problem with your bar code diagnostic form. Replace the form(s) if necessary and attempt to scan positions 30 and 75 again.

If your bar code reader can read both positions 30 and 75 correctly, the problem lies with your bar code reader. Contact Scantron Customer Support as described in “Product Support and Services” on page 157.

NOTE: Positions 30 and 75 contain bar codes that are 10 thousandths of an inch wide—the least difficult to read.
Add a Select Stacker to your OpScan 4ES or iNSIGHT 4ES scanner enables your scanning software to select sheets with errors (or other criteria you specify) and send them to a separate tray. This chapter covers setup, testing, operation, display panel messages, and cleaning of the Select Stacker.
Chapter : Select Stacker  
Setting Up the Select Stacker

**Setting Up the Select Stacker**

**NOTE:** This installation procedure assumes that the scanner has already been set up and is fully operational.

1. Mount the Select Stacker to the scanner by placing the two mounting tabs securely into the holes on the scanner.

![Image of Select Stacker mounted on scanner]

2. Install the sheet deflector as shown.

![Image of sheet deflector installation]

*Sheet Deflector*
3. Mount the select stacker (lower) tray to the Select Stacker. The metal hooks go into the slots in the Select Stacker.

4. Mount the output stacker (upper) tray to the Select Stacker.
5. Connect the Select Stacker to the scanner using the special cable as shown.

6. Plug in the Select Stacker by performing the following. Connect the power cord to the power strip. Connect the power supply to the power cord. Finally, connect the power cable to the Select Stacker as shown. It is acceptable to plug the Select Stacker, the scanner, and the host computer into the same power strip.
Testing the Select Stacker

Once you have set up the Select Stacker, you can test it to ensure that sheets are properly placed in either the output stacker (top tray) or the select stacker (bottom tray).

To test the Select Stacker, use the following procedure.

1. Hold down (at the same time) the left and right buttons found under the display panel for about five seconds to enter the background menu. When the Background Menu message appears briefly, release the buttons.

2. Press the Next button five times or until you reach the following menu item.

   Diagnostics Menu
   ↓Enter↓  ↓Next↓

3. Press Enter to enter the Diagnostics menu.
4. Press **Next** once to get to the Feed/Select menu item. The following menu item appears.

```
Feed/Select
↓Run↓   ↓Next↓
```

**NOTE:** The Feed/Select menu item appears only if the Select Stacker is attached. If the menu item does not appear, the Select Stacker may not be setup correctly.

5. Press **Run** to run the Feed/Select test. The following menu item appears.

```
Feed/Select
↓Start↓   ↓Next↓
```

6. Load a stack of forms into the input tray of the scanner. (The forms will be reusable upon completion of the test.)

7. Press **Start** to feed sheets. The Select Stacker passes the test if sheets are fed and placed alternately into the top and bottom trays of the Select Stacker.

   If sheets are not fed and selected properly, verify setup of the Select Stacker. If you are unable to resolve the difficulty, contact Scantron Customer Support as described in “Product Support and Services” on page 157.

8. When you have completed testing, press **Next**. You will be advanced to the Background Menu menu item. Press **Exit** to exit the background menu.

```
Background Menu
↓Enter↓   ↓Exit↓
```
Scanning Procedure

The scanning procedure is essentially the same as described in “Scanning Procedure” on page 38. The only difference is in the set up of your scanning software. You will need to set up the conditions upon which sheets are selected in your scanning software.
Understanding Select Stacker Messages

When connected, the Select Stacker is part of the integrated diagnostics system that is standard on OpScan 4ES and iNSIGHT 4ES scanners. If an error occurs, an error message appears in the display panel.

This chapter identifies error messages associated with the Select Stacker, tells how to resolve issues, and explains button functionality.

Terminology

- Output stacker sensor and select stacker sensor refer to the sensors located in the exit slot which monitor the paper path from the transport bed to the output stacker (top) tray and the select stacker (bottom) tray.
- Output stacker (top) tray and select stacker (bottom) tray refer to the two metal trays attached to the select stacker.
Errors are generally caused by either paper or debris that block the output or select stacker sensors. In most cases, clearing the paper jam or cleaning the sensors will resolve the issue.

Select Stacker Messages

Error messages associated with the Select Stacker are covered in Chapter 5, “Display Panel Messages”. The messages are listed in alphabetical order. If an error persists after you perform the suggested procedure, contact Scantron Customer Support as described in “Product Support and Services” on page 157.
Cleaning the Select Stacker

Cleaning the Select Stacker helps ensure trouble-free operation. Use the following guidelines when cleaning the Select Stacker.

Schedule

In general, it is best to clean your select stacker when you clean your scanner - about once a month. If you scan an extremely large number of sheets, scan sheets made of lower quality paper, or you get error messages, you may need to clean more often.

Supplies

We recommend the following supplies for cleaning the Select Stacker:

- Lint-free cloths
- Static-reducing spray
- Canned air (with a non-condensing propellant)
Procedure

The illustration below shows the location of key components. To clean the select stacker, follow the steps that follow.

1. Clean the output and select stacker sensors.
   - Spray canned air directly on the output stacker sensor.
   - Spray canned air directly on the select stacker sensor.

2. Clean the select stacker bed.
   - Remove the output stacker and select stacker trays.
   - Lift the sheet deflector up and off the two knob hangers. Set the sheet deflector aside.
• Spray canned air directly on the select stacker bed area. This removes any dust and other types of debris.

3. Clean the output stacker and select stacker trays using a lint-free cloth to remove any dust and other types of debris from the trays.

4. Once cleaning is completed, replace the sheet deflector, the output and select stacker trays, and (if necessary) reconnect the Select Stacker to the scanner.

Welcome to the Scantron family of high performance OMR (Optical Mark Recognition) and OMR with Imaging scanners. These scanners significantly reduce the time that you spend collecting data.

The OpScan 4 ES is the latest Scantron OMR scanner which translates marks to ASCII data that can easily be stored in your databases. The OpScan 4 ES features fast throughput and excellent value in a durable desktop model. The iNSIGHT 4 ES has all the capabilities of the OpScan 4 ES plus the ability to scan grayscale images. The iNSIGHT 4 ES collects image clips and full page images, reads bar codes on both sides of the sheet, allows heads up editing and key from image, and, with optional software, reads machine and hand print. Both series include compatibility with Scantron’s ScanMark scanning language, enabling you to continue using legacy applications and create new ones.

For over 30 years, Scantron has been delivering high-accuracy data collection tools designed to streamline your processes. Trust Scantron to continue this tradition and to provide you with a springboard to take advantage of emerging technologies.

Please visit us at www.scantron.com for a complete overview of OpScan 4ES & iNSIGHT 4ES scanner capabilities or call us at 1-800-SCANTRON (1-800-722-6876) for more information.
