

PrintFlex and ScanFlex

Options for Data Collection Flexibility

Have you ever wished you could print your own forms for use with your Scantron image scanner? Would you like to be able to print as many of these forms, whenever you need them? And with all of this, do you want to be assured that these forms will give you the data accuracy you've come to expect from Scantron? PrintFlex™ forms design software and ScanFlex™ scanning utility software from Scantron gives you greater control over forms availability and inventory.

PrintFlex Plain Paper Forms Design and Printing

The PrintFlex optional module of Scantron DesignExpert™ software gives you a set of tools for plain paper forms designing and printing. Wizards for drawing OMR (optical mark read) bubble grids and alignment of form identification and timing marks make for easy technical design. Personalize your form by adding text, such as survey or test questions, logos and other images, as well. You can even overprint or pre-slug variable data such as names, student ID numbers, course codes and dates onto each form as it is printing.

PrintFlex is designed to give you autonomy with your forms. You decide how many and when to print. So, if your organization has access to a local PostScript® laser printer, you can print forms for use with Scantron image scanners on demand.

We offer a set of instructions for your plain paper forms design. Paper for printing PrintFlex designed forms is available for purchase from Scantron.

ScanFlex Plain Paper Scanning

Forms that are designed and printed using DesignExpert's PrintFlex module have more flexible design tolerances than those printed at Scantron's forms printing facilities. To accommodate these variations, we are introducing the ScanFlex optional module of ScanTools Plus scanning utility software.

Built into ScanFlex are a number of features that help to ensure the accuracy of your scanned data. ScanFlex automatically finds and adapts to timing marks and response positions so that data is located and recognized.

As documents are scanned, ScanFlex automatically locates the scannable portions of the document while adjusting the image to accurately capture data. Scannable data may include traditional "bubble" response positions, as well as pre-printed response positions, printed characters, and handprint recognition. ScanFlex is designed to be used with Scantron iNSIGHT™ scanners..

IMPROVE CRUCIAL BUSINESS PROCESSES WITH SUPERIOR FORM DESIGN TODAY
