You may be thinking, “I wish I could collect more safety data, but it’s so hard and time-consuming!” Now it doesn’t have to be—automate the process using SafetyCapture instead. Spend more time improving your workplace safety and less time collecting and processing observations, checklists and inspections. Why settle for frustrating and inefficient when you have easy and effective at your fingertips? Let SafetyCapture do the heavy lifting for you.

Tired of manually entering safety data?
If you are supporting a safety culture—SafetyCapture can help:
• Reduce your backlog of forms
• Maintain consistent and accurate records
• Provide audit documentation quickly and easily
• Track safety issues proactively

When it comes to safety observation data, capturing the right data, the right way, is a critical first step in your behavior-based safety program. SafetyCapture helps you optimize the design of your safety observation forms for automated data collection.

Need quick reports you can easily share?
SafetyCapture’s reports help companies improve workplace safety and lower insurance costs by enabling them to easily monitor and identify safety program information. See important data that captures the effectiveness of your company’s safety programs over time. Choose from our standard reports that reflect what safety professionals need or work with Scantron to design custom reports to match the information you need to share. Reports can be viewed online, printed, or exported as a PDF, Excel, or CSV file for distribution or further analysis.

Want the flexibility of forms that match your needs?
Scantron is a leader in designing and producing forms that are effective and reliable. We work with you to design forms to capture exactly the information you most want to track. Depending on the specific SafetyCapture solution you choose, you can print your own plain paper form, or Scantron can print the forms for you at our world-class printing facility. Scantron-printed forms are guaranteed to be scannable and reliable, delivering results you can trust.

Partnerships expand your options!
“Realizing we needed to have a single solution and one which would work, we researched the strengths of using Scantron’s SafetyCapture onDemand (SCoD) to capture observation data automatically, then integrating the collected data with IndustrySafe. What we found were two very willing and cooperative partners in Scantron and IndustrySafe.”

Joseph P. Henderson
General Manager, Safety and Security
Safety Capture is a system that captures data from safety forms, turning that information into onscreen data you can view and use easily. Forms can include check boxes, barcodes, and comment areas.

- Use your existing desktop scanners or purchase dedicated scanners from Scantron.
- Print your own forms or have Scantron print forms for you.
- Use Safety Capture’s graphical reports or connect the scanned data to your existing safety management system.

Each Safety Capture solution is designed to fit your workflow and needs.

**What is Safety Capture?**

**How Does It Work?**

**Step One: Observe, Inspect, Check**

Employees simply fill out a paper form, then drop it off at a central location for scanning or complete a mobile form.

**Step Two: Scan**

A staff member scans the forms. Depending on your configuration, Safety Capture prompts for data verification. Once scanning is complete, your data is ready to use—in minutes, instead of days or weeks!

**Step Three: Report**

Depending on which solution you choose, your data can be seamlessly transferred to your tracking system for further analysis or you can view reports right in your Safety Capture solution.

“One injury costs you a fortune. I’m eliminating the risks for a lot of injuries. This has saved lives — I’m not exaggerating.”

Flexible Options Provide a Solution That Meets Your Needs

Scantron provides several solutions for capturing critical safety data. Each option can be tailored to suit your exact requirements.

**Safety Capture onDemand: Web-Based Solution**

Safety Capture onDemand is perfect if you have multiple locations where safety data may be collected via observations, inspections, and checklists. It’s web-based, so anyone you authorize can access the system anywhere there’s an Internet connection.

Forms are scanned and uploaded to a secure web server, where the data becomes available for online reporting and analysis.

**Safety Capture Desktop: Simple, Centralized Processing**

Use Safety Capture Desktop if you prefer a completely customized workflow installed directly on your computers. We’ll work with you to create and install the exact solution you need.

Forms are scanned at your desk and processed as part of a custom application for reporting and tracking.

---

**Desktop Solutions**

*Perfect for single-operator form capture and reporting!*

---

**Web-based Solutions**

*Great for capturing observations and creating reports with distributed teams in multiple locations!*
