

SurveyTracker Plus®

Network

When organizations rely on more than one person to conduct simultaneous surveys, the need to share information between team members is vital. SurveyTracker Plus Network is the perfect solution for organizations that find themselves in this situation.

SurveyTracker Plus Network is a survey management software tool that promotes collaboration of development responsibilities between team members. This cost-effective tool streamlines development time by providing a better platform to produce and deploy surveys using a variety of distribution methods.

SurveyTracker Plus Network Offers a Host of Features Including:

- Quick installation/setup of the server and client software.
- User Groups which combine a number of users into a single unit.
- SurveyTracker Administrator accounts. Users with an administrator account can add or remove users and establish groups.
- Users can establish permissions to their own content so they can decide who can and cannot access the project.
- Permissions can be established for the entire project or they can be targeted to specific areas such as Survey Design, Data and Reports only, etc. Permission types include Full Control, Read Only, or Deny.
- Libraries of pre-written and user-defined content can be shared between users and groups.

SurveyTracker Plus Network survey software combines the great features of SurveyTracker Plus with advanced network capabilities that deliver unsurpassed user and project management features.

SurveyTracker Plus Network Excels by Providing Organizations with the Ability to:

- Define administrators who can establish users and groups as well as oversee job tasks and provide editorial review over survey content.
- Enhance organizational cooperation by allowing team members to work together to design surveys and analyze results.
- Set up customizable User Permissions for individual users and groups. Each user and group can be granted permission to entire projects or only to specific work areas in the projects.
- Develop and collaborate on surveys and store the work for future use.
- Distribute surveys using a combination of web, paper, kiosks, and surveys on a disk.
- Distribute reports to PDF and EMF file formats.
- Export response data so you can create reports in other products. Exports formats include text files, Microsoft Access database, Microsoft Excel spreadsheet, SPSS file, and more.
- Share Question, Message, and Image Libraries with other users. Entire surveys and style templates can also be shared so the surveys maintain a consistent look and feel. Each user can share their library so an entire group can share templates set up with corporate branding.

With SurveyTracker Plus Network's built-in research methods, even users who are inexperienced with the survey process can apply advanced techniques such as branching, piping, audience sampling, skip and hit, mail merge, validation, and more for professional results.

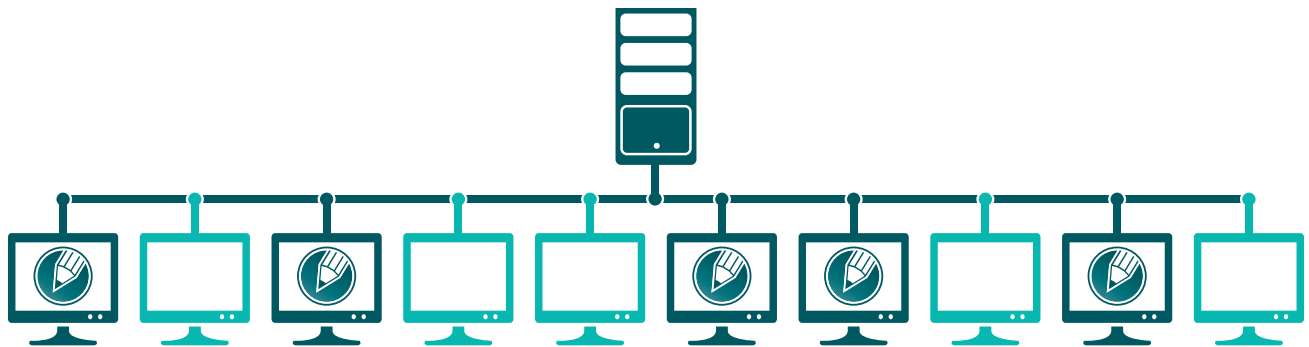

Survey Administrators Have The Power To Maximize Efficiency And Productivity For Impressive Results

When several users or groups are involved in survey projects, a centralized administrator becomes the backbone of the team. The administrator can review the status of all projects in progress and can easily assign tasks as the need arises. With the central management, the administrator can ensure that the proper users are assigned their specific tasks while simultaneously monitoring the overall progress of the survey project. The added flexibility given to

the administrator ensures that he or she has more control over the flow of the survey projects.

Concurrent User License

The Concurrent User configuration allows you to purchase the software based on your needs—start with a two concurrent user license and purchase additional seats if you need them. The server version is installed and registered on the network server and the workstations are installed on as many systems as needed. The number of users who can login and work at the workstations at one time is based on the number of concurrent user licenses purchased.

This diagram represents the Concurrent User configuration. In this example of a five concurrent user license, 10 workstations have SurveyTracker Network installed but only five users are able to use SurveyTracker at the same time.
