

EvaSys Survey System

Gathering feedback about how your stakeholders, customers, or constituents think (e.g., product and service satisfaction, community issues and impact, and training evaluations) is a crucial part of making strong, data-based decisions for your organization. The most effective way to collect this feedback and gain the insights it provides is to ask for it. Scantron's EvaSys web-based survey system makes this process easy and effective.

Gather Insights in Multiple Ways

EvaSys makes it easy to deliver surveys and capture responses in a variety of ways:

- On mobile devices
- Online using a computer
- On paper forms to be scanned
- Via a QR code link to a survey

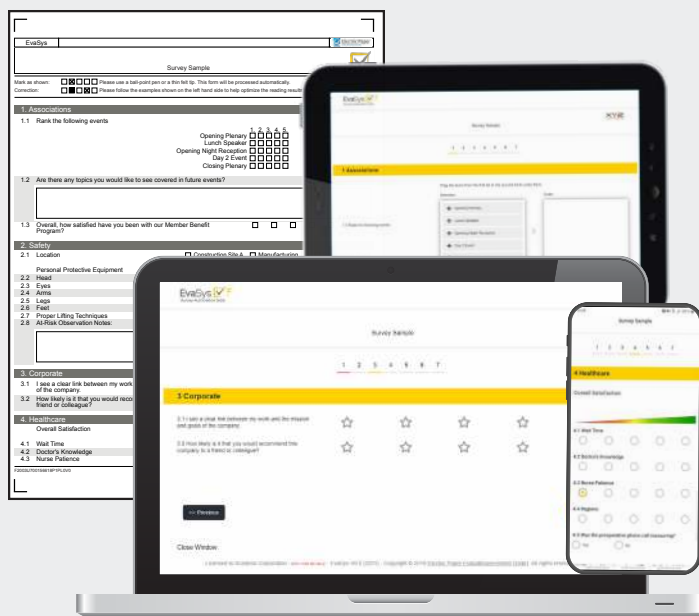

You can choose one or all delivery methods to match the way respondents want to complete the survey.

Improve Quality with Data-Driven Decisions

Good business decisions rely on current data, including customer satisfaction and opinion. EvaSys helps you capture and analyze the data you need to make decisions based on data.

Understand Your Audience

The best way to understand your audience is to ask questions. EvaSys automates the process, so you can focus on identifying the key insights that drive ongoing operations, new product offerings, and business needs.

Create and Deliver a Wide Variety of Surveys

- Customer Engagement
- Customer Satisfaction
- Product/Solution Perception
- Market Research
- Employee Engagement
- Job Satisfaction
- Net Promoter Score
- Safety Observation
- Observational Assessment
- Health Risk Assessment
- Patient Satisfaction
- Training or Seminar Evaluations

Save Time and Effort with Easy Survey Design

After you know what questions you want to ask, EvaSys provides an easy method to design and distribute the survey form.

The design tool includes:

- Automatic conversion to mobile, online, or paper forms
- A variety of available question types:

The screenshot shows a 'Question Wizard' window with the title 'Please choose a question type:'. It lists several question types with icons and a question mark icon to the right of each:

- Scaled Question
- Open Question
- ICR Question (Handwriting recognition)
- Single Choice Question
- Multiple Choice Question
- Ranking Question
- Matrix Field
- Grade Value Question

At the bottom, there are 'Back', 'Next', 'Apply', and 'Cancel' buttons. A small note at the bottom states: 'Please note that the VividForms Editor does not apply the English hyphenation rules to the texts entered (question texts, pole labels, text boxes etc.). Please place line breaks accordingly.'

- A question wizard to guide you through every step of question creation.
- A question library, so you can design questions once, then re-use them in multiple surveys
- Imagery and appearance options so you can apply company branding
- Branching and skipping for online forms to reduce the effort respondents must make to complete your survey
- Automated, scheduled distribution to ensure your survey reaches the right respondents at the right time

Flexible Reports Provide the Insights You Need

Responses are available for reporting as soon as they come in, allowing you to perform realtime analysis of critical business feedback.

Predefined report layouts quickly and easily display key metrics as data becomes available. You can also export report data for external analysis.

Unlike many other web-based survey solutions, EvaSys stores all your data, whether you install the solution on your servers or host the solution on our servers. You can use this stored wealth of data to compare data sets (for example, comparing results year over year), aggregate reports, drill down to deeper detail or filter by respondent demographics.
