

Assessment Technology

Proprietary Software Tools Designed for Certification & Licensure

Scantron has designed our software to enable and empower clients to work faster while improving accuracy. Because the technology works so efficiently, we can spend more time on what matters—driving your credentialing program's success and growth.

Agile Design Environment®

ADE®, Scantron's **item authoring and banking tool**, offers a powerful online platform for reliable, thoroughly documented, and secure item and test development. Fully integrated with our test delivery system, ADE allows our psychometric staff to work with client representatives to manage examination forms through development, delivery, and maintenance in a seamless manner. The tool supports geographically dispersed, asynchronous examination form creation, review, and approval, thereby eliminating travel expenses in many instances. Through ADE, examination forms are assembled to test specifications, and item performance statistics are readily available. Unmatched in the market, ADE is highly configurable and user-friendly, reducing training time and increasing productivity. Recently, a client shared upon becoming an ADE user, "this is the most elegant piece of software I've ever seen."

Scantron PASS™

PASS is a secure **internet-based test delivery system**. Developed and maintained by Scantron's software engineers, the system leverages today's testing technologies to support a variety of delivery options. The proprietary software is used exclusively by our clients and is hosted by Scantron. PASS is

maintained in state-of-the-art redundant architecture and is hosted in an enterprise-class data center that ensures the reliability and security required by the most demanding credentialing organizations. And, because we designed our system to be internet-based delivery rather than computer-based delivery, exam content is never downloaded to the test site or delivery computer, and PASS never exposes more than one item at a time during the testing process.

Scantron Connect™

Scantron Connect offers clients an **online credentialing and candidate management system (CMS)** that serves as a single point of access to connect the candidate, credentialing organization, Scantron, and other stakeholder partners to facilitate a client's various credentialing needs. Connect also offers a configurable and cost-effective solution for program and data management.

Scantron ContentLock™

Scantron ContentLock is a robust **internet browser lockdown tool** incorporated into PASS. Designed in-house by high-stakes testing experts, ContentLock provides optimal testing environment security during a testing appointment.

**STRENGTHEN YOUR
CREDENTIALING
PROGRAM TODAY!**
